REPORT:

This ISR serves as an inspection report for the leak testing performed on the dangerous waste tank piping systems in the PRF gloveboxes. JCS workpackage 22-92-01570, work plan WP-PFP-92-PRF-052 and PFP-PAP-043 R/3 provide the work instruction for this task.

There are 4 tank systems involved, WM-1, 19, 39 and 40. 4 leaks were identified and repaired in accordance with PAP-043. Locations are as follows.

1. Directly under EMV 19A, the fitting connecting it to the valve to tubing.
FIX - replace konzentrik seat.
2. approx. 6" under EMV 19A a tee was leaking on both vertical ends.
FIX - replace konzentrik seats. (2 leaks total)
3. 1/2" Coupling just downstream of recirculation pump #39.
FIX - tighten fitting.

Inspections were performed for leaks during recirculation and transfer processes as instructed by the work plan. After identified leaks #s 1 & 2 above were repaired the recirculation and transfer process were run again. This was also the case with leak # 3. After the second recirc and transfer process was performed no leaks were identified in any of the 4 tank systems involved.

All inspections were performed viewing into the 1st and 2nd floor west PRF gloveboxes.

There is no remote inspections associated with this ISR, all inspections were direct visual.

INSPECTOR: BRUCE W STEVENER WELD/MECH. LEVEL II
