CHAMBER OF COMMERCE**

August 9, 2022

The Honorable Joseph R. Biden, Jr.
President of the United States
The White House
1600 Pennsylvania Avenue, NW
Washington, DC 20500

Dear President Biden:

We write to you regarding the importance of adequately funding – and successfully completing – cleanup of the Department of Energy’s Hanford Site in Washington State. This effort is a top priority for the state of Washington, regional tribes, residents of the Tri-Cities, and other impacted communities near Hanford.

As you may know, Hanford played a key role in the United States’ national security mission beginning in World War II and operating throughout the Cold War, ultimately producing approximately two-thirds of our nation’s plutonium stockpile. Hanford’s production mission transitioned to cleanup in 1989 with the signing of the Hanford Federal Facility Agreement and Consent Order, also known as the Tri-Party Agreement (TPA).

Given its role as the “workhorse” for plutonium production, the scope of Hanford cleanup is immense, representing one of the most complex and challenging environmental remediation efforts on the planet. Thirty-three years after the TPA was signed, much progress has been made at Hanford, including the remediation of over 1,300 waste sites, demolition of over 900 facilities, and treatment of over 27 billion gallons of groundwater, but there is much more work to do.

This remaining work includes remediation of hundreds of additional facilities and waste sites, packaging and shipment of the country’s largest volume of transuranic (TRU) waste, treatment of billions of gallons of additional groundwater, and retrieval and treatment of 56 million gallons of radioactive and chemical waste currently stored in 177 underground tanks. Importantly, this large

volume of tank waste presents one of the most significant long-term risks at Hanford, and tank waste treatment is the largest cost driver for the entire cleanup effort.

In its “2022 Lifecycle Scope, Schedule and Cost Report” the Department of Energy (DOE) estimated the costs for Hanford cleanup to be between \$300.2 billion and \$640.6 billion, with active cleanup complete in the year 2078. On average, this equates to annual funding of between \$5.36 billion and \$11.44 billion. Notably, the report also identifies that significant budget increases will be needed beginning in Fiscal Year 2024 (FY24) to support a new scope of work for design, engineering, and construction of the High-Level Waste (HLW) facility in addition to the ongoing activities across the Hanford Site.

It is imperative that your FY24 budget request includes the necessary resources for this critical phase of Hanford cleanup, and for Congress to ensure that this funding is provided. Specifically, we believe that the appropriate funding level in FY24 is \$3.76 billion – along with a recognition that this increased funding must be continued in subsequent fiscal years.

Doing otherwise will only increase long-term costs for the American people while increasing the risk to human health and the environment. We also recognize the important cleanup work taking place at other DOE Office of Environmental Management (EM) sites, and we strongly believe that all these efforts should be fully funded. Therefore, we encourage the Administration and Congress to support an increased budget for the entire EM program.

Thank you for your careful consideration of this urgent national priority. We welcome the opportunity to discuss it with you further.

Please contact any of the following with questions: Geoff Potter, Director of International Relations and Protocol for Governor Inslee, at Geoff.Potter@gov.wa.gov or (360) 867-8690; Carrie Sessions, Senior Policy Advisor for Environment and Water for Governor Inslee, at Carrie.Sessions@gov.wa.gov or (253) 290-1126; or Laura Watson, Director of the Washington State Department of Ecology, at Laura.Watson@ecy.wa.gov or (360) 407-7001.

Sincerely,

Jay Inslee, Governor
State of Washington

Kate Brown, Governor
State of Oregon
