

WASTE SITE RECLASSIFICATION FORM

Operable Unit: 100-DR-1

Control Number: 2019-013

Waste Site Code(s)/Subsite Code(s):

100-D-59

Reclassification Category: Interim Final

Reclassification Status: Closed Out No Action Rejected
 RCRA Postclosure Consolidated None

Approvals Needed: DOE Ecology EPA

Description of Current Site Waste Condition:

(what is the current physical state of the site? what activities have been performed?)

The 100-D-59 site is a former French drain at the acid transfer station for the 183-D Water Treatment Facility. The drain was completely removed during remediation of the acid handling facility (100-D-72 waste site).

Basis for Reclassification:

(how does the site meet the reclassification status?)

The selected remedy for the 100-D-59 waste site in the Record of Decision, Hanford 100 Area Superfund Site, 100-DR-1, 100-DR-2, 100-HR-1, 100-HR-2 and 100-HR-3 Operable Units (100-D/H ROD) is no action. This site meets the criteria for unrestricted land use.

The 100-D-59 site was previously reclassified as "rejected" on the basis that discharged acids would readily neutralize in soil. The reclassification status is being changed to "(final) no action" to align with the 100-D/H ROD. During site evaluations for the 100-D/H ROD, the potential for discharge of mercury-contaminated sulfuric acid to the drain was identified. Analysis of a sample collected from the footprint of the former drain during remediation of the 100-D-72 waste site did not detect mercury above cleanup levels for the 100-D/H ROD.

Project Manager Comments:

Waste Site Controls:

	Yes	No		Yes	No		Yes	No
Engineered Controls	<input type="radio"/>	<input checked="" type="radio"/>	Institutional Controls	<input type="radio"/>	<input checked="" type="radio"/>	O&M Requirements	<input type="radio"/>	<input checked="" type="radio"/>

If any of the Waste Site Controls are checked "Yes", specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents:

N/A
