Description of Current Site Waste Condition:

*(what is the current physical state of the site? what activities have been performed?)*

The 100-D-50:3 subsite encompasses cooling water supply lines from the former 190-D High Bay to the 105-DR Reactor. Portions of these pipelines have been incidentally removed during facility demolition and remediation of other waste sites, but most of the pipelines remain in place within a subgrade tunnel.

Basis for Reclassification:

*(how does the site meet the reclassification status?)*

The selected remedy for the 100-D-50:3 subsite in the Record of Decision, Hanford 100 Area Superfund Site, 100-DR-1, 100-DR-2, 100-HR-1, 100-HR-2 and 100-HR-3 Operable Units (100-D/H ROD) is no action. This site meets the criteria for unrestricted land use.

The 100-D-50:3 subsite was previously reclassified as "rejected" on the basis that the pipelines were never put into operational use. The reclassification status is being changed to "(final) no action" to align with the 100-D/H ROD.
