Waste Site Reclassification Form

Date Submitted: 8/5/1998	Operable Unit(s): 300-FF-2	Control Number: 98-061
Originator: C. E. Corriveau, Jr., MSIN H0-17	Waste Site ID: 300-198	
Phone: 372-9565	Type of Reclassification Action: Rejected <input checked="" type="radio"/> Closed-Out <input type="radio"/> No Action <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

The site is a vertical vitrified clay pipe with a steel lid. An eye bolt is fastened to the center of the lid. The cover needs to be removed to confirm the function of the site. The site is listed in the "Inventory of Miscellaneous Streams", Revision 3, as steam #397.

Basis for reclassification:

Steam was produced from sanitary water that had been sent through a water softener system to remove minerals (calcium and magnesium). The treated water was introduced into boilers to produce steam. This steam was superheated before distribution to facilities for heating and process use. Disposal sites received steam condensate from the steam distribution lines. When used for heating purposes, this was a seasonal discharge. Non-regulated chemicals were added to dechlorinate the water, prevent scale, and control corrosion. The site is an active structure that receives less than 0.19 liters (0.05 gallons) per minute steam condensate only. Disposal structures meeting the definition of "underground injection control", as stated in WAC 173-218, are registered (listed) as underground injection wells. This site is exempt from permitting under WAC 173-216 because Ecology considers the WAC 173-218 registration to be sufficient for sites that received steam condensate only.
