WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1 **Control No.:** 2017-023
Waste Site Code(s)/Subsite Code(s):
200-E-99

Reclassification Category: Interim Final
Reclassification Status: Closed Out No Action Rejected
RCRA Postclosure Consolidated None
Approvals Needed: DOE Ecology EPA

Description of current waste site condition:
(What is the current physical state of the site? What activities have been performed?)
The 200-E-99 waste site is a former steam condensate drain associated with a deactivated and partially removed above-grade steam transfer line. During a site visit on March 29, 2017, the rim of an open, approximately 24-inch diameter vitrified clay pipe was partially visible at the surface beneath the steam line (see attached photograph). A portion of the vitrified clay pipeline lip appears to have been broken off and is laying nearby, but no known decommissioning or other intrusive activities have been performed.

Basis for reclassification:
(How does the site meet the reclassification status?)
The French drain was used for discharge of steam condensate only. The feature will continue to be managed and dispositioned as an underground injection control well.

WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-023

Waste Site Code(s)/Subsite Code(s):

200-E-99

Project Manager comments:

Waste Site Controls:

Engineered Controls: Yes No Institutional Controls: Yes No O&M Requirements: Yes No

If any of the Waste Site Controls are checked Yes, specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents:
