### PARTICULATE, METALS AND ANON ANALYSIS - 183-H SOLAR BASIN, 100-H AREA

Attached are the results of the 76 environmental samples and blanks analyzed using approved NIOSH analytical procedures for particulate, metals, and anions from the sludge removal operations at 183-H Solar Basin Number 2, 100-H Area. These samples were collected between July 31 through October 3, 1986, by S. R. Somers and T. A. Synder of Environmental Health Sciences to coincide with sludge removal operations. Sampling locations attempted to maintain a single upwind site and two downwind locations to help characterize the fugitive emissions from the solar basins. The sample data are shown in the attached table. For actual wind direction and sampling locations on a specific data, please refer to the attached data table and area map.

If you have any questions concerning this report, please contact Environmental Health Sciences.
