INTERNATIONAL TECHNOLOGY CORPORATION

CERTIFICATE OF ANALYSIS

Westinghouse Hanford Company
P.O. Box 1970
Richland, WA 99352

July 25, 1994

Attention: J.A.Lerch

SAF Number	:	94-130
Date SDG Closed	:	June 10, 1994
Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	W0077
Data Deliverable	:	Stand Alone

I. Introduction

On May 27, 1994, two water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

ITAS-Richland ID	WHC ID	Matrix	Date of Receipt
405586-01A	B0BYF8	Water	5/27/94
405586-02A	B0BYG3	Water	5/27/94

II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gamma Spectroscopy
Gamma Scan by method ITAS-RD-3219
Liquid Scintillation Counting
Technetium-99 by method ITAS-IT-RS-0001

III. Quality Control

The analytical results for each analysis performed under SDG W0077 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

Gamma Spectroscopy

Gamma Scan by method ITAS-RD-3219
The LCS was recounted twice because of a low bias on the Co-60 result which resulted from the gamma spectroscopy software splitting the uneven Co-60 peak. The third count of the LCS is accepted and reported. Pb-212 was detected in the duplicate of sample B0BYF8 at an activity of less than two times the error and is not reported. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BYF8) results are within contractual requirements.

Liquid Scintillation Counting

Technetium-99 by method ITAS-IT-RS-0001
The matrix spikes, LCS, batch blank, sample and sample duplicate (duplicate of sample B0BYG3) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

LABORATORY NONCONFORMANCE MEMO (NCM) ITAS-Richland

PROJECT ID (Name/Number): WHC W0077

NCM INITIATED BY (Name/Date): Joe I T Kempema 7-7-94

PARAMETER(S): Gamma

SAMPLE NUMBER(S) AFFECTED: L0558615 , F0558601

MATRIX: Water

AREA: ☐ SHIP/REC ☒ RADIOCHEM ☐ COUNTING ☐ BIOASSAY ☐ DATA VERIF ☐ REPORTING ☐ OTHER:

NONCONFORMANCE [check appropriate item(s)]:

1. ☐ Not enough sample received for proper analysis.
2. ☐ Holding time exceeded by _____ days due to:
   - 2.1. ☐ CATEGORY I: Out of Laboratory Control
     - ☐ Holding time expired at receipt.
   - 2.2. ☐ CATEGORY II: Laboratory Dependent
     - ☐ work backlog ☐ instrument failure
     - ☐ communication ☐ other (see #10)
   - 2.3. ☒ CATEGORY III: Laboratory Reruns
     - 2.3.1. ☒ QA/QC:
       - ☐ surrogates ☐ internal standards
       - ☒ spike recoveries ☐ blank contamination
     - 2.3.2. ☒ CONFIRMATION:
       - ☐ second column ☐ contamination check
       - ☒ other (see #10)
     - 2.3.3. ☐ DILUTION:
       - ☐ over calibration ☐ under calibration
       - ☐ other (see #10)
     - 2.3.4. ☐ OTHER: (see #10)
3. ☐ Sample lost during extraction/analysis; no re-prep or re-analysis possible.
4. ☐ QC data reported to client outside of:
   - ☐ method limits ☐ internal limits
   - ☐ QAPP limits ☐ contract limits
   - ☐ regulatory limits ☐ blank criteria
5. ☐ Incorrect procedure(s) used. (See #10)
6. ☐ Invalid instrument calibration. (See #10)
7. ☐ Incorrect/incomplete data reported to client. (See #10)
8. ☐ Reported detection limit(s) higher than:
   - ☐ method limits ☐ QAPP limits
   - ☐ contract limits ☐ other (see #10)

   Due to:
   - ☐ sample matrix ☐ insufficient sample
   - ☐ instrumentation ☐ other (see #10)

9. ☒ Other (specify): F0558601 Pb212 detected 2X error > result do not report - discuss in case narrative

10. ☒ Comments/Explanation: L0558615 - counted 3 times peaksearch split Ac228 peak

NOTIFICATION [check appropriate item(s)]:

1. ☐ Client notified by (name and date):_____
   - ☐ in writing ☐ by FAX
   - ☐ by phone ☐ Other (explain)
2. ☐ Client's name _____ and response:
   - ☐ process "as is" ☐ resample
   - ☐ on hold til ___ ☐ Other (explain)

Dear Karl,

Attached is the data validation report for analytical results for 200-BP-5 Groundwater Operable Unit (SDG W0077-ITC-089). The package was received by Los Alamos Technical Associates on August 3, 1994. Validation of this package began on August 17, and was completed on August 23, 1994.

If you have any questions, please let me know.

Sincerely,

Janet M. Jones
Senior Environmental Engineer

200-BP-5 Groundwater Operable Unit
Data Validation Narrative

INTRODUCTION

All samples in Sample Delivery Group (SDG) W0077-ITC-089 were validated at level "D" as defined in the Data Validation Procedures for Radiochemical Analyses (WHC-SD-EN-SPP-001).

The data package was received by Los Alamos Technical Associates (LATA) on August 3, 1994. Validation began on August 17, 1994 and was completed on August 23, 1994.

The radiochemical analyses were performed by International Technology Corporation, ITAS.

ANALYSES REQUESTED

Two (2) water samples numbered BOBYF8 and BOBYG3 were collected on May 17, 1994 by WHC and transferred to International Technology Corporation (ITC) for analysis. The following determinations were conducted on all of the samples in this SDG:

Gamma Spectroscopy:
Gamma Scan Method ITAS-RD-3219

Liquid Scintillation Counting:
Technetium-99 Method ITAS-IT-RS-0001

DATA QUALITY OBJECTIVES

The data quality objectives for 200-BP-5 Groundwater Operable Unit are specified in the *Quality Assurance Program Plan for the 200-BP-5 Groundwater Operable Unit* (DOE/RL 88-32, Rev. 1). Precision, accuracy, and detection limit requirements for the project have been derived from the laboratory SOW.

The primary objective of the data validation effort was to ensure these data quality objectives were met, and that the data are usable and defensible. This was accomplished through a detailed examination of the data package to recreate the analytical process and verify that proper and acceptable analytical techniques had been applied. The data package was checked for correct submission of required deliverables, correct transcription of raw data to the summary forms, and for proper calculation of a number of parameters.

Precision. Goals for precision were met with the exception of those items discussed under "**MINOR DEFICIENCIES**".

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limits goals were met for all sample results except for Ru-106 in BOBYF8, BOBYG3 or the QC associated with the batch.

Completeness. The data package was complete for all requested analyses.

Data qualifiers are assigned to any results that have been determined to be deficient. These are discussed below.

MAJOR DEFICIENCIES (REJECTED DATA)

* No major deficiencies were identified during validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were discovered. These minor shortcomings are not expected to significantly affect the overall quality of the data.

* No minor deficiencies were identified during validation which required qualification of data.

COMMENTS

* There was no evidence that the pH is being checked before the analysis of the samples.

* The matrix spike recovery for Tc99 was not calculated correctly. The Form I is edited.

* The gamma scan (GEA) spike had to be counted 3 times before getting an acceptable spike recovery. No qualifier was necessary.

* The Ru106 MDA from the QAPP is 3 pCi/L. This was not met for BOBYF8, BOBYG3, or the QC associated with the batch.

* There is no VEDD (Validation Electronic Data Deliverable) included with this package due to the fact that no qualifications were made or changed by the validator.

DATA VALIDATION APPLIED QUALIFIERS

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows.

U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ- Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during data validation, the associated quantitation limit is an estimate.

J- Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision making purposes.

BJ- Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R- Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency the data are unusable.

UR- Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data are unusable due to an identified QC deficiency.

JN- Indicates a tentatively identified compound (TIC) that has been determined to be valid in terms of identification and quantitation.

UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

NJ- Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific application (i.e., usable for decision making purposes).

N- Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision making purposes).

LABORATORY APPLIED QUALIFIERS

Qualifiers which may be applied by the laboratory in compliance with applicable requirements are as follows.

Organic Data Qualifiers

U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

J- Indicates an estimated value. This flag is used when estimating concentrations of tentatively identified compounds (TICs) or when the presence of a TCL compound is confirmed at a concentration of less than the CRQL but greater than the IDL.

N- Indicates presumptive evidence of a compound. This flag is used only by the laboratory for TIC results when the identification is based on a mass spectral library search.

P- This flag is used for pesticide/Aroclor target analytes when there is greater than 25% difference for detected values between the quantitation and confirmation GC columns. The lower of the two concentrations is reported on the report form and the result is flagged with a "P".

C- This flag applies to pesticide results where the identification has been confirmed by GC/MS. This flag should not be used by the laboratory if GC/MS confirmation was attempted but unsuccessful, in which case, the laboratory should use an "X" flag as defined below. The "X" flag is then defined in the SDG narrative.

B- This flag applies to results in which the analyte was detected in both the sample and the associated blank. The combination of the "B" flag with the "U" flag ("BU" or "UB") is expressly prohibited in the analytical SOW.

E- This flag identifies compounds whose concentrations exceed the calibrated range of the GC/MS instrument.

D- This flag identifies compounds identified in an analysis at a secondary dilution factor.

A- Indicates a TIC which is a suspected aldol-condensate product.

X- This is a non-specific flag used to properly define the results. If used, this flag must be properly defined within the body of the SDG.

LABORATORY APPLIED QUALIFIERS

Inorganic Qualifiers

U- Indicates the analyte was analyzed for but not detected in the sample.

B- Indicates the analyte concentration is less than the CRDL but greater than the IDL.

E- Indicates the value reported is estimated due to the presence of interference.

M- Indicates duplicate injection precision criteria were not met during graphite furnace (GFAA) analysis.

N- Indicates spiked sample recovery was not within the control limits.

S- Indicates the reported value was determined by the Method of Standard Additions (MSA).

W- Indicates post-digestion spike for GFAA analysis is outside control limits and the sample absorbance is less than 50% of the spike absorbance.

*- Indicates duplicate analysis was not within control limits.

+- Indicates the correlation coefficient (r) for the MSA was less than 0.995.

Total Uranium by Laser Fluorometry

$$\frac{(WF - I)(R)(D)}{WU - WF}$$

where:

WF = *sample reading with Fluran*
I = *initial sample reading*
R = *concentration of uranium standard after dilution with sample* ($\mu g/L$)
D = *dilution factor*
WU = *sample reading with uranium standard*

Radium-226 by Radon Emanation

$$D = \frac{C}{(2.22)(E)(V)} \times \frac{1}{1 - e^{-\lambda t_1}} \times \frac{1}{e^{-\lambda t_2}} \times \frac{t_3}{1 - e^{-\lambda t_3}}$$

where:

C = *net count rate, cpm*
E = *calibration constant of the de-emanation system and the scintillation cell in counts per minutes/disintigrations per minute of radon-222*
V = *sample aliquot in liters*
t_1 = *the elapsed time in days between the first and second de-emanations, and* λ *is the decay constant for radon-222* ($0.181\ d^{-1}$)
t_2 = *the time interval in hours between the second de-emanation and counting, and* λ *is the decay constant of radon-222* ($0.00755 hr^{-1}$)
t_3 = *the counting time in minutes, and* λ *is the decay constant of radon-222* ($1.26 \times 10^{-4}\ \text{min}^{-1}$)
2.22 = *conversion factor, dpm/pCi*

********************** MDA, Uncertainty Calculations **********************
*     Calculations are based on the average background counts (bkg) and    *
*     average sample count times (Ts).  Results are in Act/Unit.           *
*                                                                          *
*          MDA = [(4.65 * sqrt((bkg c/m)/Ts)) + 2.71/Ts] * K,              *
*                where K is the factor that converts the                   *
*                associated result from CPM/Aliquot to Act/Unit.           *
*                                                                          *
*     The calculated MDA value may be lower than the True MDA.             *
*     The MDA is the activity level that can be detected above the mean blank *
*     value, Xo (Xo is not included)!  In addition, only the Poisson counting *
*     uncertainty is used to estimated the background variability!         *
*                                                                          *
*      * Uncertainty estimates (errors) are one standard deviation (1s) !  *
*                                                                          *
*     The average error is calculated as follows:                          *
*     SQR(SUM(Random var) / N + SUM(Sym var) / N)                          *

DATA VALIDATION SUMMARY

MAJOR DEFICIENCIES:

1. None

MINOR DEFICIENCIES:

1. None

COMMENTS:

1. There is no evidence that the pH was checked on the samples before analysis.
2. The matrix spike recovery for Tc99 was not calculated correctly. The Form 1 is edited.
3. The gamma scan (GEA) spike had to be counted 3 times before getting an acceptable spike recovery. No qualifier necessary.
4. The Ru106 MDA from the QAPP is 3 pCi/L. This was not met for BOBYF8, BOBYG3, or the QC associated with the batch.

Laboratory Case Narratives

INTERNATIONAL TECHNOLOGY CORPORATION

CERTIFICATE OF ANALYSIS

Westinghouse Hanford Company
P.O. Box 1970
Richland, WA 99352

July 25, 1994

Attention: J.A.Lerch

SAF Number	:	94-130
Date SDG Closed	:	June 10, 1994
Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	W0077
Data Deliverable	:	Stand Alone

I. Introduction

On May 27, 1994, two water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

ITAS-Richland ID	WHC ID	Matrix	Date of Receipt
405586-01A	B0BYF8	Water	5/27/94
405586-02A	B0BYG3	Water	5/27/94

II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

Regional Office
2800 George Washington Way • Richland, Washington 99352-1613 • 509-375-3131 • FAX: 509-375-5590

The requested analyses were: **Gamma Spectroscopy**
Gamma Scan by method ITAS-RD-3219
Liquid Scintillation Counting
Technetium-99 by method ITAS-IT-RS-0001

III. Quality Control

The analytical results for each analysis performed under SDG W0077 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

Gamma Spectroscopy

Gamma Scan by method ITAS-RD-3219
The LCS was recounted twice because of a low bias on the Co-60 result which resulted from the gamma spectroscopy software splitting the uneven Co-60 peak. The third count of the LCS is accepted and reported. Pb-212 was detected in the duplicate of sample B0BYF8 at an activity of less than two times the error and is not reported. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BYF8) results are within contractual requirements.

Liquid Scintillation Counting

Technetium-99 by method ITAS-IT-RS-0001
The matrix spikes, LCS, batch blank, sample and sample duplicate (duplicate of sample B0BYG3) results are within contractual requirements.
