Waste Site Reclassification Form

Date Submitted: 8/4/1998	Operable Unit(s): 300-FF-2	Control Number: 98-051
Originator: C. E. Corriveau, Jr., MSIN H0-17	Waste Site ID: 300-189	
Phone: 372-9565	Type of Reclassification Action: Rejected <input checked="" type="radio"/> Closed-Out <input type="radio"/> No Action <input type="radio"/>	

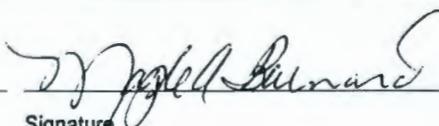

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

The site is a french drain that is a 10 centimeter (4 inch) metal pipe through the asphalt that surrounds the building. The pipe is about 0.75 meters (2.5 feet) deep. The downspout that enters it comes from the top half of the building, about 0.6 meters (2 feet) south of the swamp cooler. The site is listed in the "Inventory of Miscellaneous Streams", Revision 3 as stream #269.

Basis for reclassification:

The site is inactive and received less than 1.9 liters (0.50 gallons) per minute steam condensate only. Steam was produced from sanitary water that had been sent through a water softener system to remove minerals (calcium and magnesium). The treated water was introduced into boilers to produce steam. This steam was superheated before distribution to facilities for heating and process use. Disposal sites received steam condensate from the steam distribution lines. When used for heating purposes, this was a seasonal discharge. Non-regulated chemicals were added to dechlorinate the water, prevent scale, and control corrosion.
