Meeting Minutes Transmittal/Approval
Unit Manager's Meeting: 100 Aggregate Area/100 Area Operable Units
100-BC ERA Excavation Site, Hanford Area
July 20, 1995

FROM/APPROVAL: Nancy Werdel Date 8/23/95
Nancy Werdel, 100 Area Unit Manager, RL (H4-83)

APPROVAL: Keith K. Holliday Date 8-23-95
Phil Staats, 100 Aggregate Area Unit Manager, WA Dept of Ecology (B5-18)

APPROVAL: Dennis Faulk Date 8-23-95
Dennis Faulk, 100 Aggregate Area Unit Manager, EPA (B5-01)

Meeting Minutes are attached. Minutes are comprised of the following:

- Attachment #1 - Meeting Summary
- Attachment #2 - Attendance Record
- Attachment #3 - Agenda
- Attachment #4 - July Unit Manager's Meeting 100 Area Status Package Source Units
- Attachment #5 - July Unit Manager's Meeting 100 Area Status Package Groundwater Units
- Attachment #6 - Summary of 100-BC FRA Excavation Demonstration (7/20/95)
- Attachment #7 - Remedial Action Requirements

Prepared by: Alan Krug Date: 8/22/95
Alan Krug, Tamen Lundquist, ERC (H4-91)

Concurrence by: Greg Eidam Date: 8/23/95
Greg Eidam, BHI 100 Area Manager (H4-91)

Attachment #1
Meeting and Summary of Commitments and Agreements

Unit Manager's Meeting: 100 aggregate Area/100 Area Operable Units
July 20, 1995

1. **SIGNING OF THE JUNE 100 AREA UNIT MANAGER'S MEETING MINUTES** - The review and approval of the minutes were deferred until the August meeting.
2. **ACTION ITEM UPDATE:** The Action Item Update was deferred until the August Meeting.
3. **NEW ACTION ITEMS:**

None.

4. **100 AREA ACTIVITIES:**

- **ROD Strategy Discussion:** Dennis Faulk (EPA) indicated that the EPA had not yet developed a ROD Strategy for the remaining 100 Area Source Operable Units. He expressed a desire to have this completed within 30 days, to coincide with EPA's review of the 100-BC-2 Focused Feasibility Study and Proposed plan. His preference is to prepare one 100 B Area ROD which would include the low priority sites.

A joint EPA/Ecology/DOE/ERC ROD Strategy Meeting was proposed for Monday, July 31, 10:00 a.m.

- **FY96 Budget Planning:** Greg Eidam (ERC) noted that DOE guidance on the FY 96 budget was expected on July 24, 1996. A \$173 million budget is expected.
- **Remedial Action Requirements:** Greg Eidam (ERC) passed out a handout (Attachment 7) on Remedial Action Requirements which was prepared at the regulators request.

A joint EPA/Ecology/DOE/ERC meeting was proposed for August 2, 1995, 8:00 a.m. to discuss this.

- **Public Meeting Update:** It was noted that the Next Public Meeting will be on July 25, 1995.
- **Relocation of Investigation Derived Waste (IDW) in D Reactor :** Joan Woolard (ERC) noted that the location of IDW for the D and H Areas needed to be changed, due to possible impacts by nearby D&D activity. Keith Holliday (Ecology) agreed to visit the proposed site and discuss it with Joan Woolard.
- **Handout Status Package:** Alan Krug (ERC) and Dick Biggerstaff (ERC) passed out the July

- Handout Status Package: Alan Krug (ERC) and Dick Biggerstaff (ERC) passed out the July UMM Status Packages (attachments 4 & 5).
 - Tour of 100-BC-1 Demonstration: John April (ERC) made a brief presentation of the status of the demonstration and passed out a descriptive handout (attachment 6). A tour of the site was held.
 - 116 Data Quality Objectives (DQO) Meetings: John April (ERC) noted that the 116-C-1 DQO meeting is scheduled for Monday, July 24, 1995, 2:00 - 4:00 pm. Attendance will include EPA, Ecology, Nancy Werdel, John Ludowise, John Lowe, and Roy Bauer. John April stated that ERC hoped to reduce the number of attendees in order to expedite the meeting. The facilitator will be Steve Weil. Dennis Faulk requested that he received a copy of ERC's background packet prior to the meeting.
5. **NEXT MEETINGS**: The next meeting are scheduled for:
August 23, 1995
September 21, 1995

Attachment #3
Agenda

Unit Managers Meeting: 100 Aggregate Area/100 Area Operable Units
July 20, 1995

12:45 Depart from 2440 Stevens Center Parking Lot

1:30 - 3:30

1. Tour of 100-BC-1 Demonstration - John April
2. ROD Strategy Discussion - Kevin Oates/Phil Staats
3. FY65 Budget Planning - Greg Eidam
4. Remedial Action Requirements - Greg Eidam
5. Public Meeting Update - Joan Woolard
6. Relocation of Investigation Derived Waste in D Reactor Area - Joan Woolard
7. Handout Status Package - Alan Krug

STATUS PACKAGE

JULY UNIT MANAGERS MEETING

100-BC, 100-K, 100-D, 100-H, 100-F

Focused Feasibility Studies and Proposed plans

100-BC-1 Issued final (revision 0) version of the FFS. Proposed Plan (PP) issued for public review. Public comments are due August 9, 1995.

100-BC-2 The 100-BC-2 OU FFS and PP were transmitted to DOE/RL meeting the June 30, 1995 TPA Interim Milestones M-15-16E and M-15-16F. Agency Comments are due August 15, 1995.

100-IU-1 Proposed Plan Based on Agency comments; 100-IU-1, 100-IU-3, 100-IU-4, and 100-IU-5 were combined into one proposed plan. The PP was submitted for public review in concert with 100-BC-1 PP.

100-HR-1 Rev. 0 of the 100 Area Source Operable Unit FFS including the Appendix E for the 100-HR-1 FFS) and Rev. 1 of the 100-HR-1 PP were submitted to Ecology and EPA on June 16, 1995. The 100-HR-1 PP was used as a template for revising the 100-BC-1 and 100-DR-1 PPs. A 45-day public comment period on the 100-HR-1 (and 100-BC-1 and 100-DR-1) Proposed Plan was initiated on June 26, 1995. A public meeting on the Proposed Plans is scheduled for July 25, 1995.

100-HR-2 The 100-HR-2 FFS and PP were submitted to the EPA and Ecology on January 30, 1995. Comments from the regulators were due to DOE on March 14, 1995. In the future, the 100-HR-2 FFS and PP could either (1) remain in its current stand-alone format; (2) be modified to become an appendix to the 100 Area Source Operable Unit FFS (DOE/RL-94-61); or (3) be re-presented as part of a 100-H Reactor Area FFS.

100-IU-4 and 100-IU-5 Rev. 0 of the Proposed Plan for 100-IU-4 and 100-IU-5 (that are combined with 100-IU-1 and 100-IU-3) were submitted to the regulators on June 16, 1995. A 45-day public comment period on the Proposed Plan was initiated on June 26, 1995. No public meeting is planned.

100-DR-1 The Focused Feasibility Study Report (Process Document, Sensitivity Analysis, 100-BC-1, 100-HR-1 and 100-DR-1) and Proposed Plans (100-BC-1, 100-HR-1, and 100-DR-1) were finalized and issued. The public comment period on the Proposed Plans was initiated on June 26, 1995. A public meeting on the Proposed Plans is scheduled for July 25, 1995.

100-DR-2 The 100-DR-2 Focused Feasibility Study and Proposed Plan was submitted to the regulatory agencies on June 30, 1995 to meet TPA milestone M-15-20A and M-15-20B.

100-KR-1 Regulator comments on the 100-KR-1 IRM Proposed Plan were received on May 22, 1995. Comment responses were submitted to the regulators.

The 100-KR-1 Focused Feasibility Study is being updated to conform with the latest guidance used in preparing the 10-BC-1/100-HR-1/100-DR-1 FFSs. Comment dispositions were submitted to the regulators.

100-KR-2 Work continued on the 100-KR-2 combined LFI/QRA/FFS.

100-FR-1 The 100-FR-1 PP was submitted to the Regulators on May 31, 1995. Regulator comments are expected in mid-July.

The 100-FR-1 FFS was submitted to the Regulators on May 31, 1995. Regulator comments are expected in mid-July.

100-FR-2 Work continued on the 100-FR-2 combined LFI/QRA/FFS.

Treatability Studies

Soil Washing Treatability Study During this reporting period, the Soil Washing Treatability Study Report was submitted to EPA and Ecology for review. Comments are due on August 7. A comment response meeting will be scheduled shortly thereafter.

100-HR-3 Pump & Treat Study During this reporting period the 100-HR-3 Pump and Treat system was operated continuously.

118-B-1 Excavation Treatability Study The regulators have reviewed the report and have issued a letter stating that they have no comments. The final report (Revision 0) will be issued in early July.

BC Demonstration Project

100-BC-1 ERA Verbal comments have been received on the remedial design/remedial action strategy document that was initially submitted on April 7, 1995. The Design Basis Report was completed and submitted to the Senior Review Team for ERC Review.

During this reporting period the BC Demonstration Project mobilized and initiated field work at the 116-B-5 Crib. On June 26 overburden removal began and was completed on June 29. A sonic drill rig was set up at the crib on Tuesday, June 27 and drilled and sampled nine borings 10 to 15 feet outside the southern portion of the crib to determine lateral extent of contamination. On June 30 surface samples were obtained in each of the twelve crib cells. Results from both intrusive efforts showed no radiological contamination and mercury at the effluent pipe outlet at 8 to 12 ppm's.

D Area

100-D Ponds. The Data Evaluation Report for Phase II soil sampling was submitted to the regulators.

H Area

100-HR-1 Remedial design activities continued during April in conjunction with the 100-BC and 100-DR Areas. The first 100-HR Area waste site to be addressed in remedial design is the 116-H-1 process effluent disposal trench.

100-HR-2 A redline version of Rev. 0 of the 100-HR-2 LFI was submitted to the regulatory agencies for concurrence review. The redline Rev. 0 version includes text revisions made in response to comments received from the regulators on the Draft A version.

K AREA

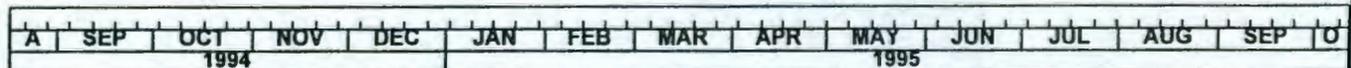

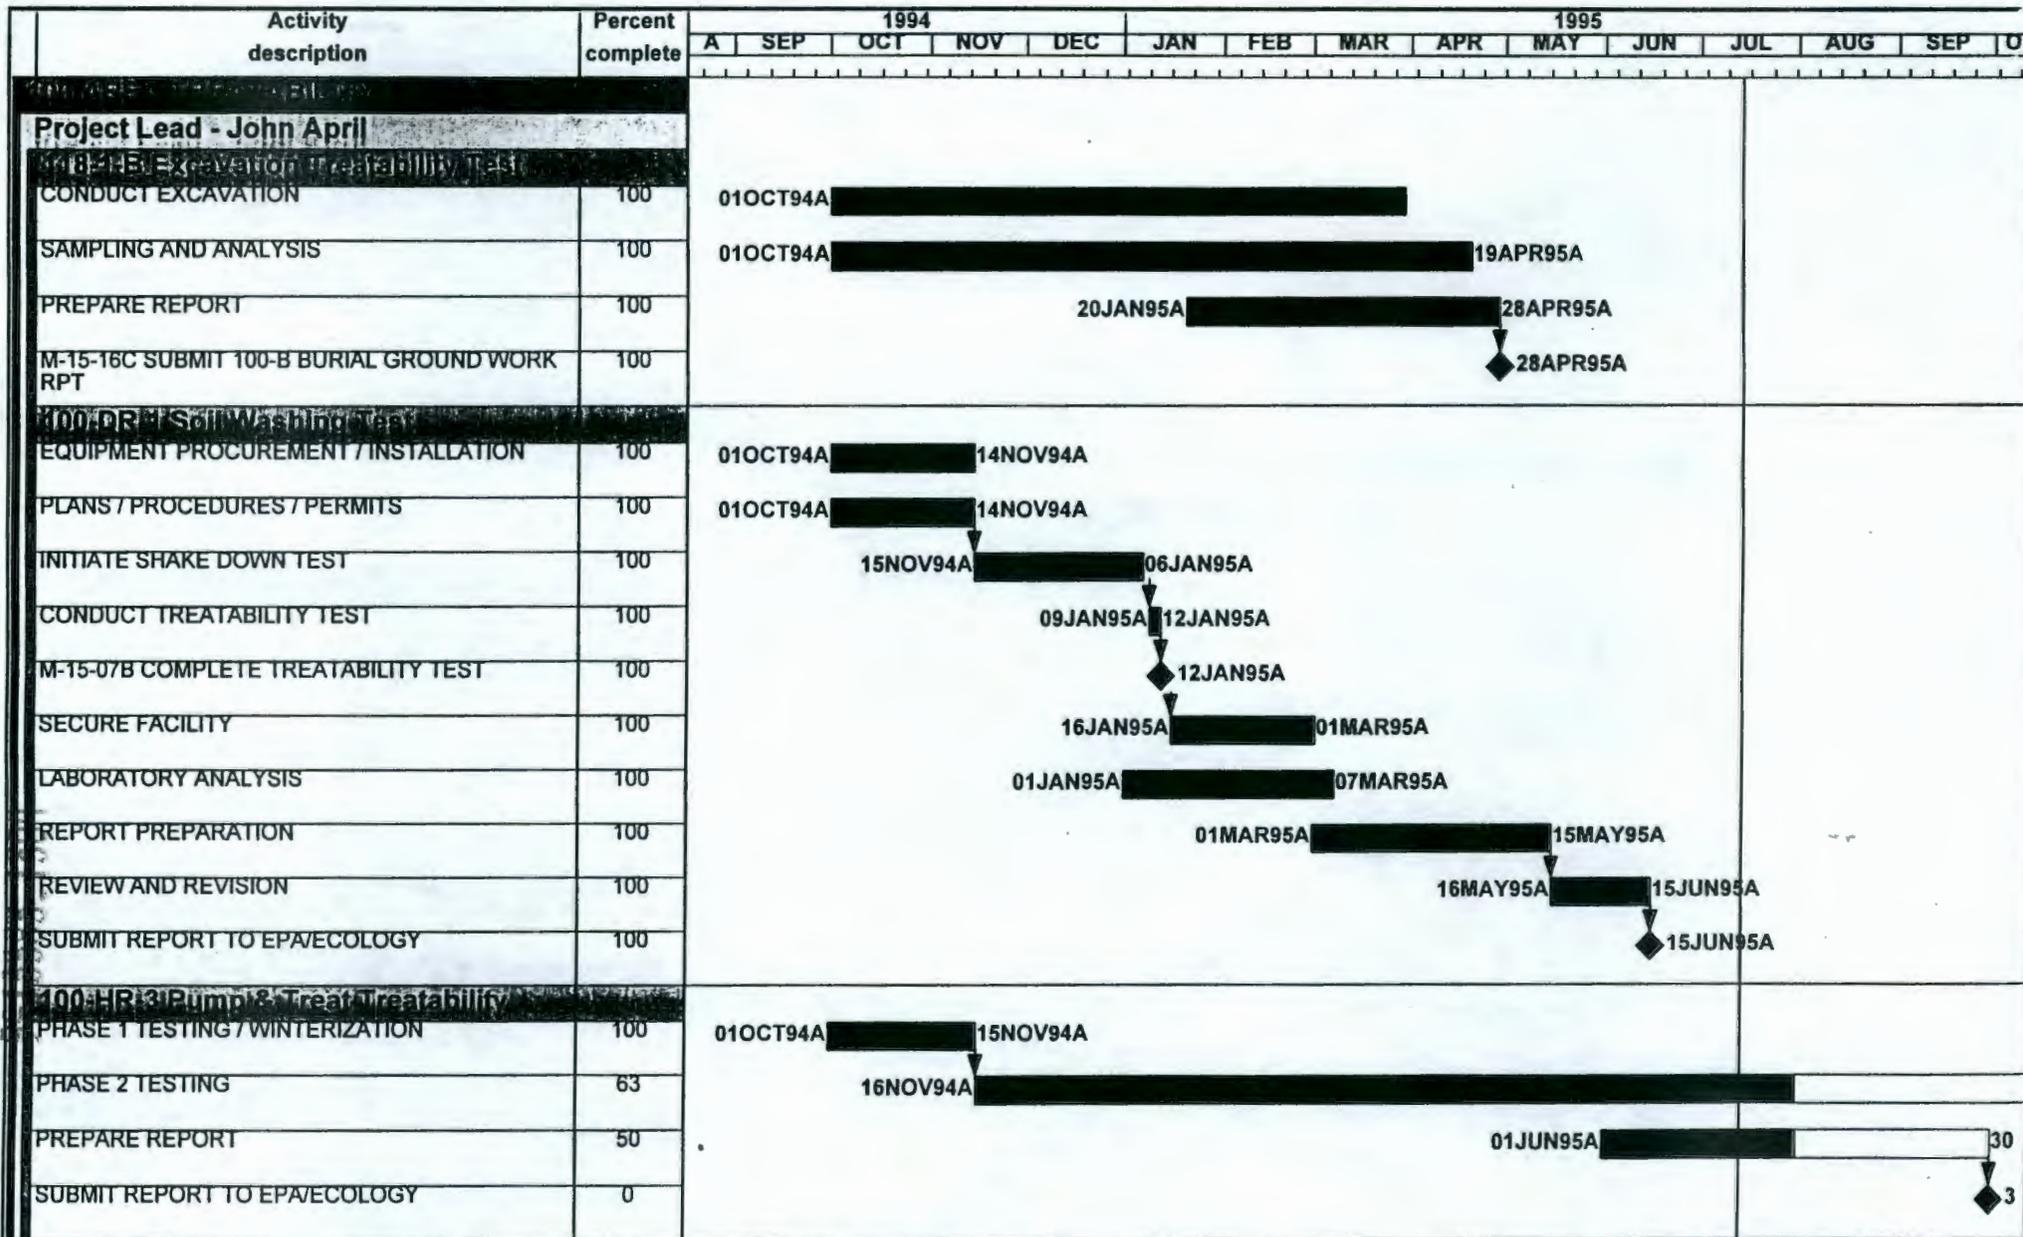

See Focused Feasibility Studies and Proposed Plans

2021 APR 14 10 10 AM

F AREA

100-FR-1 Regulator comments on the 100-FR-1 LFI/QRA were received in early March. Comment dispositions were sent to the Regulators in May.

100-FR-2 The 100-FR-2 Focus Package was submitted to the regulators for public review.

STATUS PACKAGE

JULY UNIT MANAGERS MEETING

100-BC-5, 100-KR-4, 100-HR-3 & 100-FR-3

GROUNDWATER OPERABLE UNITS

Groundwater

100-BC-5 Comments were received from the regulators on the 100-BC-5 Focused Feasibility Study (FFS) and IRM Proposed Plan. Responses to regulatory comments were provided and are currently in review.

100-HR-3/100-KR-4

A proposed groundwater strategy document was prepared for RL submittal which states that RL agrees with the EPA and Ecology preference for groundwater pumping and treatment as the preferred alternative for interim action towards protection of the Columbia River. The strategy confirms that the Tri-Parties will continue to follow the Hanford Past Practice Strategy IRM pathway, and that the IRM will be focused on protection of ecological receptors.

Responses to regulator comments on the FFSs and Proposed plans were prepared consistent with the proposed strategy as well as the additional discussions with the regulators, and were transmitted to the regulators on June 9, 1995 for their review. Review comments on the FFSs and Proposed plans were received from the regulators, the comments incorporated, and the revised responses to comments were transmitted to the regulators on July 7, 1995.

FY 1995 expenditures for 100-HR-3, 100-KR-4 and 100-BC-5 were prepared and summarized as per the regulator request and were also submitted on June 9, 1995 as requested.

Comment responses were incorporated in the 100-HR-3 FFS and Proposed plan documents, and submitted for concurrent RL/ERC/regulator review on July 17, 1995.

Comment responses are currently being incorporated in the 100-KR-4 FFS and Proposed plan for transmittal on August 18 for a similar concurrent review cycle.

100-FR-3 The soil gas investigation for TCE has been completed and a status meeting was held with RL, ERC and the regulators on July 13, 1995. The investigation showed that low levels of TCE (generally less than 50 ppb) were found through out a large area with no apparent source or sources. Agreement was reached that the installation of monitoring wells was not warranted for IRM purposes. The data will be reported in a supplementary report to the current 100-FR-3 LFI. Work will then focus on completion of the FFS and Proposed Plan to meet the December 31, 1995 milestone.

SALMON SPAWNING HABITAT INVESTIGATION A summary report was prepared and submitted June 9, 1995 for concurrent RL and regulator review. Preparations for initiating additional salmon spawning habitat investigations in the 100-HR-3 and 100-KR-4 OUs in September/October are in progress.

SUMMARY OF 100-BC ERA EXCAVATION DEMONSTRATION (7/20/95)

116-B5 Crib was excavated and sampled from 6/27/95 through 7/12/95.

Initially, samples were collected by drilling nine bore holes (labeled A through H on sketch). Samples were collected at 10 feet, 12.5 feet and 15 feet. Bore hole C (southwest corner near Cell A) could not be drilled past 7 feet. Operations then moved to Bore hole D (see sketch).

After clearing away overburden and removing cell lids, samples were collected from each cell. Final sampling to 6 feet below Cells C, B, A, D, E and Cell F was performed. Significant levels of reactor isotopes were not detected (see gamma-ray energy screenings of cell samples). Sample key is as follows:

<u>Sample Number</u>	<u>Location in 116-B5 Crib</u>
BOG7C5	West Side Overburden Soil
BOG7C7	East Side Overburden Soil
BOG7C9	Crib Sand and Gravel Cell L
BOG7D1	Cell K
BOG7D3	Cell J
BOG7D5	Cell I
BOG7D7	Cell H
BOG7D9	Cell G
BOG7F1	Cell F
BOG7F3	Cell E
BOG7F5	Cell D
BOG7F7	Cell C
BOG7F9	Cell C (Duplicate)
BOG7G1	Cell B
BOG7G3	Cell A

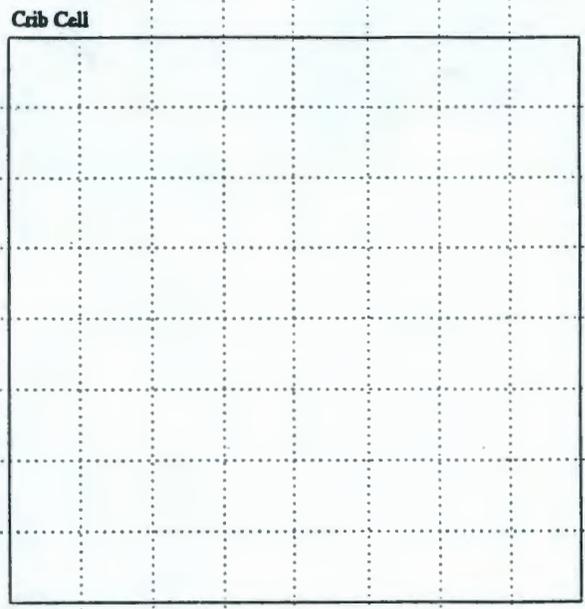

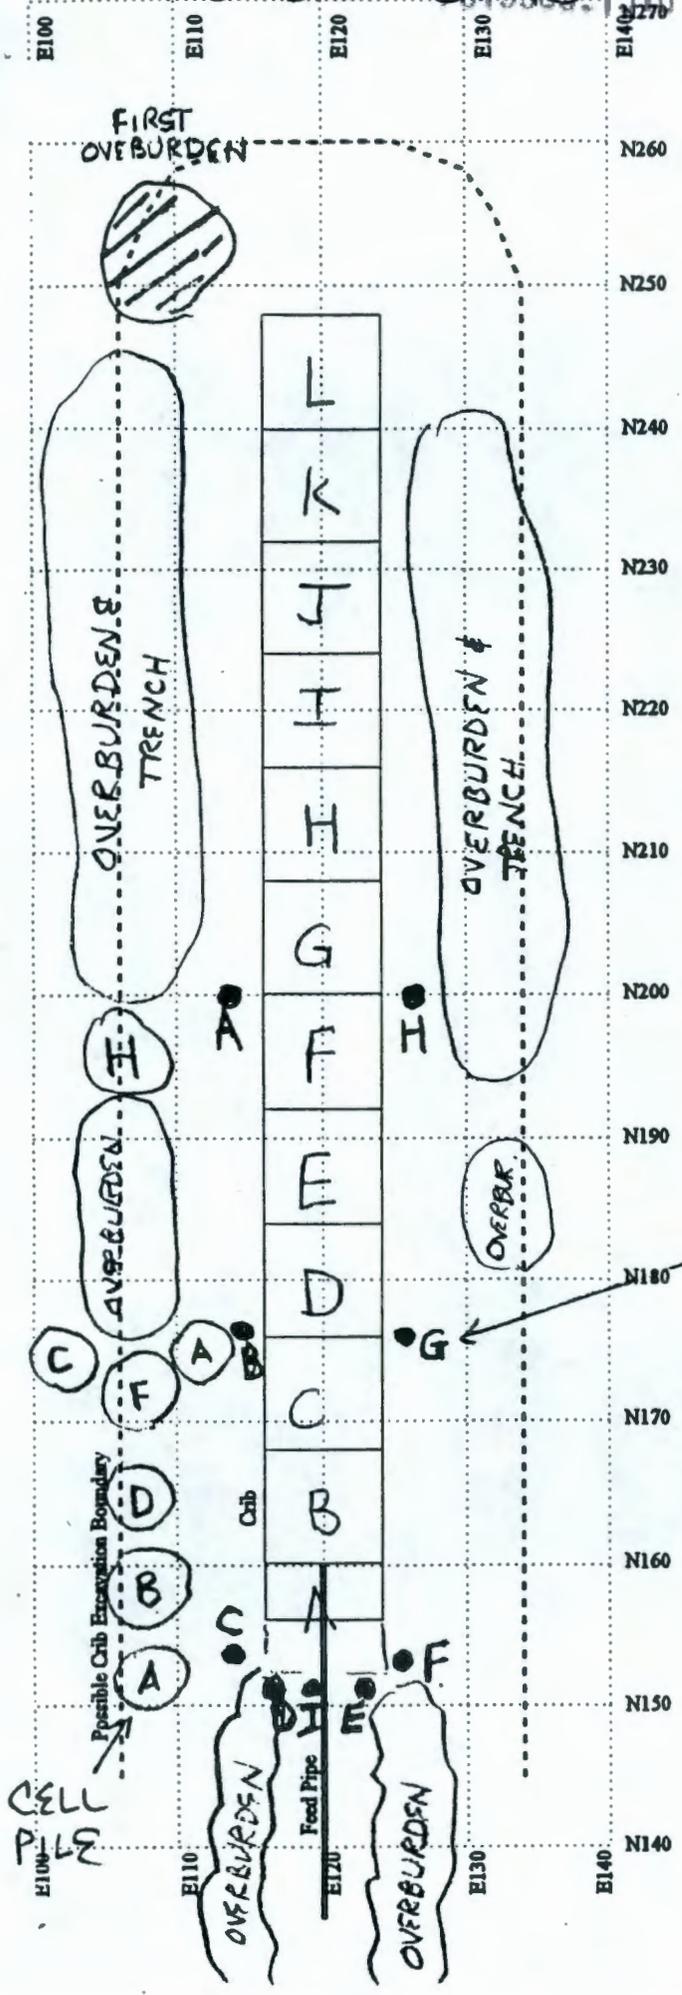

The chemical screening results of soil samples indicated potentially designating (Washington State Dangerous Waste) levels of mercury. Extraction by the Toxicity Characteristic Leaching Procedure (TCLP) and mercury analyses on four of the high samples were all <1 ug/L. Hence, none of the soil designates for mercury. At present, sampling operations have moved to 116-B4 French Drain. When all data is returned from laboratory and compiled (including off site split samples), the 116-B5 crib can be back filled.

116-B4 French Drain is currently being excavated and sampled.

As of 7/19/95, overburden has been cleared away. No structure has been found down to 6 feet deep. Samples were collected 4 feet deep just below 3 inch perforated steel drain pipe. Samples of 1-2 inch diameter drain rocks were collected for screening analyses. Radioactivity near drain pipe ranges from background to 70,000 dpm (see gamma-ray energy screenings of two samples). Plan is to excavate and sample entire drain contents down to 16 feet. Since no containment structure has been found, maximum excavation/sampling distance out from center will be 7 feet.

116-B5 05R3383.1310

SOIL PILES & BOREHOLE LOCATIONS

BOREHOLE LOCATIONS ALL DRILLED TO 15 FT EXCEPT C WHICH STOPPED AT 7 FT. SAMPLES WERE COLLECTED AT 10 FT, 12.5 FT & 15 FT.

SUBJECT: ANALYSIS OF SOILS FROM 116-B-5 CRIB

Fifteen soil samples from the 116-B-5 Crib were gamma scanned. All had less than the 50 pCi/gram limit for reactor produced isotopes.

Only in one soil sample, B0G7G3, the analytical program flagged 129-I as read. It was not, when Europium are present there is and interfering x-ray which causes the miss-identification.

The samples B0G7-F5, F7, F9, G1, and G3 had some reactor produced isotopes; 60 Co, 137 Cs, 152 Eu, and 154 Eu.

Data is recorded in an excell spreadsheet and was transmitted via CC:mail to John Ludowise. If this is a preferred method, this can become routine followed by a cover letter.

If there are questions please call.

Definitions:

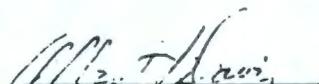

All errors reported at 2 standard deviations

The analysis of U238 is based on the activity of Pa234m

The analysis of Np237 is based on the activity of Pa233

U238dau is the activity of Pb214 and Bi214, short lived daughter products
 products of U238. Equilibrium between parent and daughter products probably
 does not exist

Th32dau is the activity of Ac228, Pb212, and Tl208, short lived daughter products
 products of Th232. Equilibrium between parent and daughter products may
 not exist

SUBJECT: **SAMPLE ANALYSIS**

Samples from the French drain 116-B-4, B0G8H8, T0, were completed and data results transmitted. The samples had low amounts of activity, but nothing greater than 50 pCi/g for the reactor produced isotopes. The natural component activity averages about 11 pCi/g for these samples.

If there are any questions please call. Thank you.

Definitions:

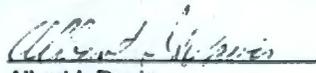

All errors reported at 2 standard deviations

The analysis of U238 is based on the activity of Pa234m

The analysis of Np237 is based on the activity of Pa233

U238dau is the activity of Pb214 and Bi214, short lived daughter products products of U238. Equilibrium between parent and daughter products probably does not exist

Th32dau is the activity of Ac228, Pb212, and Tl208, short lived daughter products products of Th232. Equilibrium between parent and daughter products may not exist

Attachment #7

Attached are the following items for your information:

- 1) Meeting Minutes, Summary of Agreements on Remedial Action Goals, 100 Area RD/RA
- 2) Calc Brief: MTCA Method B
- 3) Calc Brief: 15 mrem/yr above background
- 4) Calc Brief: Protection of Groundwater or River

These items are in support of the existing and future remedial action within the 100 Area Source Operable Units.

Action: Schedule Meeting to discuss calculation briefs for the afternoon of Thursday, July 27, 1995 or Friday, July 28, 1995.

July 20, 1995
Unit Managers Meeting

Meeting Minutes
Summary of Agreements on Remedial Action Goals
100 Area RD/RA
July 20, 1995

These minutes summarize the results of meetings held May 9th, May 23rd, May 31st, and June 14th between ERC, RL, EPA and Ecology to obtain agreements on the decision rules for implementing remedial action goals for 100 Area Remedial Design/Remedial Action (RD/RA). These decision rules address the remedial action goals as defined in the Proposed Plans for the 100-BC-1, 100-DR-1 and 100-HR-1 Operable Units. This documents the agreements for each remedial action goal that were reached during these meetings.

The remedial goals as stated in the proposed plans are: (e.g.; DOE/RL-94-99, Rev. 0, June '95)

- State of Washington *Model Toxics Control Act* (WAC 173-340) for organic and inorganic chemical constituents in soil to support unrestricted (residential) use.
- Draft EPA and Nuclear Regulatory Commission (NRC) proposed standards of 15 mrem/year in soil above background for radionuclides for human health.
- Protection of groundwater such that contaminants remaining in the soil after remediation do not result in an impact to groundwater that could exceed Maximum Contaminant Levels (MCLs) under the *Safe Drinking Water Act* (40 CFR 141). This applies to waste sites where groundwater has not been impacted.
- Protection of the Columbia River such that contaminants remaining in soil after remediation do not result in an impact to groundwater and, therefore, the Columbia River that could exceed the Ambient Water Quality Criteria under the *Clean Water Act* for protection of fish. This applies to sites where groundwater has already been impacted.

Agreements for MTCA Remedial Action Goal

Criteria	Agreement Reached with Regulatory Agencies?	Current Resolution
Land Use	Yes	Potential exposure to an individual resident will be assumed.
Exposure scenario and pathways	Yes	Scenario and pathways consistent with MTCA Method B cleanup level (WAC-173-340-740(3)); soil ingestion for a child receptor.
Exposure point	Yes	The exposure point for soil cleanup levels based on human health exposure shall be established from ground surfact to 15 ft below ground surface. (WAC 173-340-740(6)(c))
Definition of the cleanup standard	Yes	Method B formula values presented in <i>Model Toxics Control Act (MTCA) Cleanup Level and Risk Calculation (CLARC II) Update, January, 1995</i>
Cleanup standards should be above background concentrations in soil	Yes	Contaminant-specific cleanup standards will be significantly greater than Hanford site background concentrations, based on hypothesis testing (WAC 173-340-708(11)).
Cleanup standards should be above quantitation limits	Yes	Where cleanup levels are below practical quantitation limits, the cleanup level will be the practical quantitation limit (WAC 173-340-707(2)).

9513383.1335

Agreements for 15 mrem/year above Background Remedial Action Goal

Criteria	Agreement Reached with Regulatory Agencies?	Current Resolution
Land Use	Yes	Potential exposure to an individual resident will be assumed
Exposure point	Yes	The exposure point for soil cleanup levels based on human health exposure shall be established from ground surface to 15 ft below ground surface. (WAC 173-340-740(6)(c))
Compliance date for radionuclide decay	Yes	2018
Exposure scenario	Yes	Exposure scenario will be similar to that described for MTCA Method B with the following inclusions due to the influence of radionuclides. <ul style="list-style-type: none"> - External exposure - Crop ingestion - Meat ingestion - Milk ingestion - Soil ingestion
Background soils data	Yes	Hanford site background data.
Cleanup standards should be above quantitation limits	Yes	Where cleanup levels are below practical quantitation limits, the cleanup level will be the practical quantitation limit; these will be considered the CRQL/CRDL specified in previous plans.

9513383.1336

Agreements for MCLs in Groundwater Remedial Action Goal

Criteria	Agreement Reached with Regulatory Agencies?	Current Resolution
Definition of the "Waste Site"	Yes	Individual waste disposal unit, i.e., french drain, crib, etc.
What is the period of assessment to evaluate "Remaining in the Soil"?	Yes	100 years
What portion of "Groundwater" is meant by groundwater?	Yes	The average unconfined aquifer is 30 to 90 ft. For purposes of this activity a 15 ft mixing zone will be used.
How is a "Previous impact to groundwater" to be determined?	Yes	Determined by the presence of any contaminant above MCLs and/or State Water Quality Standards under the disposal unit as monitored by the current well network.
Calculation of soil concentrations	Yes	Screening of COPC followed by a calculation of soil concentrations based on the Summers method.
Cleanup standards should be above background concentrations in soil	Yes	Contaminant-specific cleanup standards will be significantly greater than Hanford Site background concentrations, based on hypothesis testing (WAC 173-340-708(11)).
Cleanup standards should be above quantitation limits	Yes	Where cleanup levels are below practical quantitation limits, the cleanup level will be the practical quantitation limit (WAC 173-340-707(2)).

9513383.1337

Agreements for AWQC at the River Remedial Action Goal

Criteria	Agreement Reached with Regulatory Agencies?	Current Resolution
Definition of when this remedial action goal is applied.	Yes	Applies to sites where groundwater is contaminated above MCLs (counterpart to the fourth criterion in the previous remedial action goal.)
Definition of the "Waste Site"	Yes	Individual waste disposal unit, i.e., french drain, crib, etc.
What is the period of assessment to evaluate "Remaining in the Soil"?	Yes	100 years
What portion of "Groundwater" is meant by groundwater?	Yes	The average unconfined aquifer is 30 to 90 ft. For purposes of this activity, a 15 foot mixing zone will be used.
Radionuclide criterion consistent with AWQC?	Yes	Use AWQC available for chemical constituents for protection of fish. Use 1 rad/day for radionuclides.
What is the dilution factor from groundwater to surface water?	Yes	A 10 to 1 dilution factor has been assumed until quantifiable data is available. POE is the river.
Calculation of soil concentrations	Yes	Calculation of soil concentrations based on the Summers method.

Calc Title: Documentation of MTCA Method B Cleanup Levels

Objective: Document MTCA Method B cleanup levels.

Methodology:

Cleanup levels for nonradioactive (chemical) contaminants are tabulated directly from *Model Toxic Control Act Cleanup Act (MCTA) Level and Risk Calculation (CLARC II) Update, August 31, 1994, and January 1995 Update.*

Assumptions:

- 1) MTCA Method B values for soil are used. This calculation sheet does not include the 100 times groundwater cleanup level values for soil, also specified in MTCA Method B. Values presented in this calculation sheet are applied only to contaminants detected within the top 15 feet of soil.
- 2) Value for cadmium is based on non-carcinogenic effects (cadmium is not a carcinogen by ingestion exposure). EPA and Washington Department of Ecology do not provide an oral cancer slope factor for estimating ingestion cancer risks from cadmium. EPA judges ingestion carcinogenicity data to be inadequate at this time (EPA, 1994).
- 3) Value for lead is based on MTCA Method A (Table 2) value, WAC-173-340-740 - no method B value for lead in CLARC.
- 4) Method B value for arsenic (1.43 mg/kg) is less than Hanford Site Background (9 mg/kg). Site background is used as the cleanup standard.

Contaminant	MTCA B Cleanup Level (mg/kg in soil)
Antimony	32
Arsenic	9*
Barium	5600
Cadmium	80
Chromium VI	400
Lead	250
Manganese	11200
Mercury	24
Zinc	24000
PCBs	0.13
Benzo(a)pyrene	0.137
Chrysene	0.137

Pentachlorophenol	8.33
-------------------	------

*Hanford site background - UCL of 95th percentile value (DOE/RL-92-42)

Attachments:

Tabulated values from CLARC II table are attached (pages 3-11).

(Updated 1/95)

printed on recycled paper

**Model Toxics Control Act (MTCA) Cleanup Levels and Risk Calculation
(CLARC II) Update
January 1995**

This document is an update to the Toxic Cleanup Program's August 31, 1994 Cleanup Levels and Risk Calculations (CLARC II) tables. A complete report will not be generated at this time. The following updates should be added directly to the August 31, 1994, CLARC II.

Excessively High-Risk Based Cleanup Levels

The use of CLARC II data can result in the calculation of excessively large cleanup levels for approximately 100-125 contaminants. This occurs primarily in the Method C Industrial Soil Category for non-carcinogens. Percent level concentrations of contaminants such as chromium (III), 1,1-dichloroethane, xylenes, etc. have been calculated. Users of CLARC II should be aware that these calculated cleanup levels may not be acceptable for a site when considering other factors, such as the potential for cross-media contamination and the need to protect natural resources (groundwater, sediments, harvestable shellfish beds) and populations that may be at a disproportionate risk.

Rounded Values

The CLARC II database includes reference doses. For printing purposes, the presentation of reference doses in this report are rounded "to four decimal places". That is, if they are less than "1" they will look like ".XXXX", where "X" is a whole number. This number may be rounded to four decimal places. Since reference doses become more important as they get smaller (the cleanup level will also get smaller) then it might be important to know the full value of the reference dose. If necessary, please contact Barb Huether at the number shown below for the non-rounded values.

Those numbers that are rounded "down" such as 0.00002 are shown as "0.0000". A number such as "0.00008" will be rounded "up" to "0.0001". Since this will make a difference in the calculation of hazard quotients, you should be aware of this when you see either ".0000" or ".000X".

Note that "0.0000" is not the same as no value being listed. When no value is listed there is no established reference dose, and a non-carcinogen cleanup value cannot be calculated.

Cancer potency factors also use "four decimal places." However, the effect is not as critical since smaller values become less consequential because they result in higher, not smaller cleanup values.

Method B and Method C "Formula Values" listed in CLARC II are computed using the entire (not rounded) reference dose in the formula calculation, and are not effected by rounding.

If you have questions regarding CLARC II, please contact either Barb Huether at (360) 407-7183 or Dick Boose at (360) 407-7190. Questions related to development of site-specific cleanup standards using CLARC II should be directed to regional offices. If you have special accommodation needs, please contact the Toxics Cleanup Program at (360) 407-7183 (voice) or (360) 407-6006 (TCDD).

As a final note, CLARC II is not mandated by law, but rather is provided as a service to staff and clients. While CLARC II is extensive, it is not exhaustive and the user may need to seek additional sources for compounds not shown. Furthermore, there is no assurance that CLARC II is free from errors, substantive or procedural, enforceable by any party in litigation with the State of Washington.

CLARC II Modification History

Date	Chemical	CAS #	Changed from	Changed to	Type
12/12/94	arochlor 1254	11097-69-1	empty	ocular toxicity; immunotoxicity	CE
12/12/94	arochlor 1254	11097-69-1	new record	0.00002 mg/kg/day	ORFD
12/12/94	arochlor 1254	11097-69-1	new record	pcbs; polychlorinated biphenyls	SYN
12/12/94	cadmium in soil	7440-43-9a	6.1 mg/kg/day	empty	OCPF
12/12/94	cadmium in soil	7440-43-9a	empty	6.1 mg/kg/day	RCPF
12/12/94	danitol	39515-41-8	withdrawn	0.025 mg/kg/day	ORFD
12/12/94	danitol	39515-41-8	empty	fenprothrin	SYN
12/12/94	difluoroethane;1,1-	75-37-6	new record	11.42857143 mg/kg/day	IRFD
12/12/94	difluoroethane;1,1-	75-37-6	empty	freon 152a	SYN
12/12/94	endosulfan	115-29-7	withdrawn	0.006 mg/kg/day	ORFD
12/12/94	hexamethylene diisocyanate;1,6-	822-06-0	new record	2.86E-06	IRFD
12/12/94	hydrogen cyanide	74-90-8	empty	.000857143 mg/kg/day	IRFD
12/12/94	hydrogen cyanide	74-90-8	empty	.2 mg/l	Proposed MCL
12/12/94	naphthalene	91-20-3	0.004	0.04	ORFD
12/12/94	nitric oxide	10102-43-9	.1 mg/kg/day	empty	ORFD
12/12/94	nitrogen dioxide	10102-44-0	1 mg/kg/day	empty	ORFD

^a Caution on misusing method A tables. Method A tables have been developed for specific purposes. They are intended to provide conservative cleanup levels for sites undergoing routine cleanup actions or those sites with relatively few hazardous substances. The tables may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in these tables should not automatically be used to define cleanup levels that must be met for financial, real estate, insurance coverage or placement, or similar transactions or purposes. Exceedances of the values in these tables do not necessarily trigger requirements for cleanup action under this chapter.

^b Arsenic. Cleanup level based on background concentrations in the state of Washington.

^c Benzene. Cleanup level based on protection of ground water.

^d Cadmium. Cleanup level based on plant protection.

^e Chromium. Cleanup level based on health risks associated with inhalation of resuspended dust.

^f DDT. Cleanup level based on concentrations derived using the procedures in subsection (3)(a)(iii)(B) of this section.

^g Ethylbenzene. Cleanup level based on protection of ground water.

^h Ethylene dibromide. Cleanup level based on protection of ground water.

ⁱ Lead. Cleanup level based on preventing unacceptable blood lead levels.

Table 6-9.a. Sitewide Soil Background Threshold Levels Calculated from the Systematic Random Data Set for Using Weibull Distribution Results. Concentrations for the Percentiles of the Distribution (on the Regression Line) Are Listed Under the Respective Percentile Headings (e.g., 80%). Concentrations Corresponding to the Upper Confidence Limit (UCL) for the Estimated Percentiles are Listed Under the Percentile UCL Heading (e.g., 80% UCL).

Calc Title: Use of RESRAD for verifying 15 mrem/year above background remedial action goal and calculating 15 mrem/year radionuclide soil concentrations

Objective: Document the assumptions, parameters and calculations used in RESRAD to verify achievement of 15 mrem/year above background remedial action goal.

Methodology:

Introduction

Cleanup of radionuclides in soils at selected 100 Area liquid waste disposal sites is intended to achieve a cumulative 15 mrem/year above background dose rate. Determining when remedial action has achieved this cleanup level involves converting radionuclide concentrations (in pCi/g) in soil into dose rates (in mrem/year) using a dose assessment model. Use of a model requires an exposure scenario that specifies a hypothetical receptor (i.e. a resident, worker or recreational user of a site), pathways of exposure from radionuclides in soil to the receptor and assumptions and parameters for estimating exposures and doses to the receptor from radionuclides in soil. This document describes the model to be selected for performing dose assessments for 100 Area Remedial Design/Remedial Action (RD/RA), describes the exposure scenario and presents the parameters and assumptions to be used in the model.

Model Selection

The model selected for 100 Area Remedial Design/Remedial Action (RD/RA) and Demonstration Project is the RESRAD (RESidual RADioactivity) model (ANL, 1993a). RESRAD was developed by Argonne National Laboratory (ANL) for implementing Department of Energy (DOE) guidelines for residual radioactive material in soil (ANL, 1993a). RESRAD has been evaluated by the U.S. Environmental Protection Agency (EPA) for use in performing dose assessments in support of the EPA's proposed radionuclide soil cleanup standard of 15 mrem/year above background (40 CFR 196) (EPA, 1994a). ~~RESRAD Version~~ Version 5.6 of RESRAD will be used for 100 Area projects.

Exposure Scenario

The regulatory agencies (EPA and Ecology) have expressed the intent that interim remedial measures for 100 Area sites did not restrict future uses of those sites. This general goal must be specified in terms of an exposure scenario and exposure pathways in order to use RESRAD to

convert radionuclide concentrations in soil into doses.

For purposes of using RESRAD, unrestricted future use of the sites is assumed to^{be} represented by an individual resident, in a rural-residential setting. This resident is assumed to consume crops raised in a backyard garden, and consume animal products, such as meat and milk from locally-raised livestock or meat from game animals. Groundwater use is not included in the exposure scenario; cleanup levels evaluated using RESRAD address contaminants only within the top 15 feet of soil. Cleanups of contaminants in soil for protection of groundwater is addressed separately from cleanups for protection of human health from contact with soil contaminants.

The selected exposure pathways are consistent with the recommendations provided by the RESRAD user's manual (ANL, 1993a), except for exclusion of the drinking water exposure pathway and ingestion of fish from surface water. As discussed previously, protection of groundwater is intended to achieve MCLs (4 mrem/year), which is consistent with the EPA's proposed radionuclide soil cleanup standard (EPA, 1994b). For fish ingestion at 100 Area sites, there is little likelihood that surface runoff to the point of exposure (the Columbia River) would contribute significantly to total exposure. For most of the contaminants of potential concern in the 100 Area, external exposure would be the dominant exposure pathway (ingestion and inhalation exposure pathways contribute little to total exposure). However, for Sr-90, ingestion pathways are the dominant exposure pathways, and should be included to properly address cleanup of Sr-90 in soil.

Exposure Pathways

Exposure pathways to be used for converting radionuclide concentrations in soil to doses are:

- External exposure
- Inhalation of suspended dust
- Inhalation of radon
- Crop ingestion
- Meat ingestion
- Milk ingestion
- Soil ingestion

Assumptions:

1. The parameters and assumptions to be used in RESRAD are summarized below in Table 1. Most of the parameters values are the defaults supplied with RESRAD (ANL, 1993b).

Attachments:

1. Table 1 with summary of assumptions and parameters.
2. Summary output file from RESRAD 5.6.

Summary : RESRAD default data File: 15MREM.DAT

Site-Specific Parameter Summary (continued)

0 Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Humidity in air (g/cm**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	8.300E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.600E-01	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	7.600E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	1.000E+06	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	1.000E-03	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	2.000E+00	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	4.000E-01	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	2.000E-01	2.000E-01	---	EPSZ
R014	Saturated zone hydraulic conductivity (m/yr)	1.000E+02	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	2.000E-02	2.000E-02	---	HGWT
R014	Saturated zone b parameter	5.300E+00	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	1.000E-03	1.000E-03	---	VWT
R014	Well pump intake depth (m below water table)	1.000E+01	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	ND	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	2.500E+02	2.500E+02	---	UW
R015	Number of unsaturated zone strata	1	1	---	NS
R015	Unsat. zone 1, thickness (m)	1.200E+01	4.000E+00	---	H(1)
R015	Unsat. zone 1, soil density (g/cm**3)	1.500E+00	1.500E+00	---	DENSUZ(1)

R015	Unsat. zone 1, total porosity	4.000E-01	4.000E-01	---	TPUZ(1)
R015	Unsat. zone 1, effective porosity	2.000E-01	2.000E-01	---	EPUZ(1)
R015	Unsat. zone 1, soil-specific b parameter	5.300E+00	5.300E+00	---	BUZ(1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCUZ(1)
R016	Distribution coefficients for Am-241				
R016	Contaminated zone (cm**3/g)	2.000E+01	2.000E+01	---	DCNUCC(2)
R016	Unsaturated zone 1 (cm**3/g)	2.000E+01	2.000E+01	---	DCNUCU(2,1)
R016	Saturated zone (cm**3/g)	2.000E+01	2.000E+01	---	DCNUCS(2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.228E-02	ALEACH(2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(2)
R016	Distribution coefficients for Co-60				
R016	Contaminated zone (cm**3/g)	1.000E+03	1.000E+03	---	DCNUCC(3)
R016	Unsaturated zone 1 (cm**3/g)	1.000E+03	1.000E+03	---	DCNUCU(3,1)

Branch Fraction is the cumulative factor for the j'th principal radionuclide daughter: CUMBRF(j) = BRF(1)*BRF(2)* ... BRF(j).
 The DSR includes contributions from associated (half-life ≤ 0.5 yr) daughters.

Single Radionuclide Soil Guidelines G(i,t) in pCi/g
 Basic Radiation Dose Limit = 15 mrem/yr.

SUBJECT: Review of RESRAD calculations for 100-BC-1 Demonstration Project

I have reviewed the calculations and narrative on the assumptions and parameters for using RESRAD in the 100-BC-1 area. The parameters seem appropriate for the residential scenario described, although it seems likely that a rural/residential family would be utilizing groundwater resources.

The only major worry I have about the methodology deals with radionuclides with progeny which contribute significantly to dose. These are ^{238}U and ^{232}Th , with the latter being of greatest concern. If it is assumed that these two radionuclides are present due to contamination only, then it is valid to assume that they are not in secular equilibrium at the time of deposition. In this case, only the relatively short-lived progeny of ^{232}Th , ^{228}Ra and ^{228}Th , would need to be accounted for if more than a few years have passed since deposition. It takes about 12 years for ingrowth of ^{228}Ra and ^{228}Th to build to equilibrium activities. Since ^{232}Th may be a COPC in the 100 Areas (it was used as a target in many if not all of the reactors), and over 12 years have passed since most of those reactors were operational, it is reasonable that its daughters are in secular equilibrium. With this assumption, 1 pCi/g of ^{232}Th + Daughters will yield a dose of approximately 13 mrem/yr in the modeling scenario you propose.

Uranium-238 has no short-lived progeny of concern which would be in secular equilibrium after only a few years. The daughters of ^{238}U which could contribute significantly to dose are ^{226}Ra , ^{222}Rn , and ^{210}Pb . Radium-226 is especially important in background considerations, as it is the parent of radon. However, ingrowth of ^{226}Ra from ^{238}U would not build to significant levels for several hundreds of thousands of years after the decay chain had been broken, because ^{234}U is between these two isotopes and has a very long half life.

Some general comments on the use of equating a 15 mrem/yr dose with a specific radionuclide activity, and interpretation of laboratory data:

If ^{238}U and/or ^{232}Th are COPCs, natural background values must be considered when evaluating the 15 mrem/yr above background dose limit. In the exposure scenario you propose, background dose for ^{238}U and its progeny is 49 mrem/yr with radon, and 9 mrem/yr without radon. Background concentrations for ^{232}Th + daughters is 9 to 12 mrem/yr (approx. 1 pCi/g of ^{232}Th and each of its progeny). One can use the lab data to determine if these parent radionuclides are in equilibrium with their progeny, and then compute appropriate dose rates. This and information on other isotopic ratios may also help to determine the presence of contamination vs. natural radionuclide activity. For example, if ^{230}Th is found to be in secular equilibrium with ^{238}U , then it may be assumed that ^{226}Ra is also present in equilibrium. Assumptions about ^{222}Rn , the next member in the decay chain, are fraught with uncertainties.

9513383.1393

In short, the only change I would make to your calculations is to add ^{228}Th to the list, and report ^{232}Th as the entire decay chain. RESRAD will do this for you if you look at the parent and ingrowths after 12 years, but ^{232}Th concentrations drop off sharply after 150 years (leaching of Th?), so look in that window.
