

## WASTE SITE RECLASSIFICATION FORM

Operable Unit: 300-FF-2

Control No.: 2013-104

Waste Site Code(s)/Subsite Code(s): 300-57; 335 Building 90-Day Waste Accumulation Area

**Reclassification Category:** Interim  Final   
**Reclassification Status:** Closed Out  No Action  Rejected   
 RCRA Postclosure  Consolidated  None   
**Approvals Needed:** DOE  Ecology  EPA

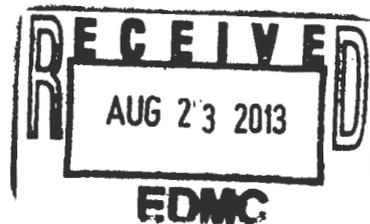

**Description of current waste site condition:**

The site was a small cinder block room addition on the west side of the 335 Building. The exterior door is locked and labeled "90 Day Storage Accumulation" and "Danger".

**Basis for reclassification:**

Initially, this waste site was reclassified as Closed-Out in 1998. The site was an inactive 90-Day Storage Accumulation Area that was used to store sodium contaminated piping and components after dismantling, prior to shipment for disposal. During the 3+ years that the less than 90 Day Accumulation Area was in use at the 335 Building, there were never any spills. There is no evidence of any spills associated with operations of this facility.

As defined in TPA-MP-14, "Maintenance of the Waste Information Data System (WIDS)", section 1.1 Definitions, Other Storage Areas include only those areas that are used to store materials not permitted under the Resource Conservation and Recovery Act. Under Part II.I.1.a of the "Dangerous Waste Portion of the Resource Conservation and Recovery Act Permit for the Treatment, Storage, and Disposal of Dangerous Waste at the Hanford Facility", active 90-day waste storage areas and dangerous waste satellite accumulation areas and their locations must be maintained as a part of the operating record for the facility. To track these units in WIDS would be redundant to the requirements of the Permit, thus, TPA-MP-14 was specifically written to exclude these units from WIDS. Therefore, as the waste site reclassification has been revised to "Rejected".
