Dear J.A. Lerch

Thank you for purchasing analytical testing services from IT Corporation. It is our intention to supply our clients with data packages which not only meet the industry's highest standards for quality, but are also easy to use. Features which we point out are:

1. A Data Summary Packet which allows you to review your data without searching through the complete data package.

Your Data Summary Packet contains the following items:

- Case Narrative: listing of sample identifications, analyses performed, explanation of any problem associated with samples, corrective action taken.
  - Quality control sample identifications and analyses performed.
  - Data summary.
2. A data package which meets the specific requirements you requested and is easy to use as well. The package is organized in accordance with the Table of Contents which you will find at the beginning of each section. Sections are separated by color-coded tabs, making it easy to find individual analytical parameters which may be of particular interest to you. The data package is custody-sealed at the laboratory - your assurance that parts of the package are not missing.

We are constantly searching for ways to improve our service to you. This current product has many of the features which you have told us are important to you. Your suggestions regarding additional improvements will be appreciated.

Please contact me with any questions or suggestions.

Sincerely,

Sheree Schneider

This is the Certificate of Analysis for the following samples:

SDG:	W0038
Client Project ID:	WHC SAF-94-130 200-BP-5 Groundwater-Round-1
Date Received by Lab:	April 19, April 22, April 25, April 27 and April 29, 1994
Number of Samples:	Twenty (20)
Sample Type:	Water

### I. Introduction

On April 19, April 22, April 25, April 27 and April 29, 1994, twenty (20) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. Sample BOBNP1 was received with a pH of 10. See attached CUR #1486. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

### II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

## II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for sulfate based on EPA method 375.4.

The alkalinity of the samples was determined using EPA method 310.1.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

## III. Quality Control

The samples for work order #388 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 6 through May 14, 1994; the remaining metals were analyzed by ICP on May 6, 1994. All run QC was acceptable. Samples were batched with QC from work order #379. The initial calibration verification standard/LCS and continuing calibration verification standard for cyanide were outside acceptance limits on the high side. However, as no cyanide was detected in the sample this does not adversely affect the results. The linear range for silicon was determined on May 24, 1994.

The samples for work order #418 were digested on May 20, 1994 for ICP and May 5, 1994 for GFAA. The GFAA analyses for selenium and bismuth were performed on May 11 and May 24, 1994; the remaining metals were analyzed by ICP on May 24, 1994. All run QC was acceptable. Samples were batched with QC from work order #379. The LCSW/ICV for cyanide exceeded acceptance criteria by 3%.

The samples for work order #428 were digested on May 26, 1994 for ICP and May 10, 1994 for GFAA. The GFAA analyses for selenium and bismuth were performed from May 12 through May 16, 1994; the remaining metals were analyzed by ICP on June 1, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNP7 and BOBNP8. Spike recovery (accuracy) results were within acceptance limits for all requested parameters. As the silicon concentration in sample BOBNP8 was greater than four times (4X) the spike added, spiking criteria did not apply for this analyte. Duplicate RPD (precision) results were within acceptance limits for all requested parameters except for iron by ICP analysis on sample BOBNP7. Poor precision for this analyte appears to be attributable to contamination during sample preparation. The samples were analyzed for cyanide outside of holding time due to original analysis results missing one sample and to confirm positive value on sample BOBNM5.

### III. Quality Control (Continued)

The samples for work order #439 were digested on May 11, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 12 through May 16, 1994; the remaining metals were analyzed by ICP on May 24, 1994. All run QC was acceptable. The ICV/LCS for cyanide was outside acceptance limits on the high side by 3%. No cyanide was detected in the samples. The samples were batched with QC from work order #428.

The samples for work order #455 were digested on May 12, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 16 through May 20, 1994; the remaining metals were analyzed by ICP on June 2, 1994. All run QC was acceptable. The ICV/LCS for cyanide was slightly outside acceptance limits on the high side. As the samples contained this analyte slightly above the CRDL, it should be noted that the sample results may be partially elevated. The samples were batched with QC from work order #428.

Data were reported with qualifiers as follows:

#### "C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

#### "Q" Qualifiers

- \* - Duplicate analysis outside control limits.
- N - Spiked sample recovery outside control limits.
- W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
- S - The reported value was determined by method of standard additions.

#### "M" Qualifiers

- P - Analysis performed by ICP.
- V - Analysis performed by CVAA.
- F - Analysis performed by GFAA.
- C - Cyanide analysis by manual distillation/colorimetric determination.

#### Miscellaneous

- D - Duplicate.
- S - Spike.
- NR - Not required.
- G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
- X - Detection limits higher than normal due to sample matrix interferences.

## II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

**Alpha Spectroscopy**

Plutonium-238, -239/40 by method ITAS-RD-3209

**Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

**Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Gross Beta by method ITAS-RD-3222

Strontium-90 by method ITAS-RD-3204

**Liquid Scintillation Counting**

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

**Total Uranium**

Total Uranium by method ITAS-RD-4200

## III. Quality Control

The analytical results for each analysis performed under SDG W0038 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

## IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

### **Alpha Spectroscopy**

#### Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNP3) results are within contractual limits.

### **Gamma Spectroscopy**

#### Gamma Scan by method ITAS-RD-3219

The detection limit for Eu-152 was not met on the first count of samples (B0BNN9) and (B0BNP5). The detection limits were achieved for all analytes on the recount. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNP7) results are within contractual limits.

### **Gas Proportional Counting**

#### Gross Alpha by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM5) results are within contractual limits.

#### Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM5) results are within contractual limits.

#### Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM7) results are within contractual requirements.

### **Liquid Scintillation Counting**

#### Technetium-99 by method ITAS-IT-RS-0001

One matrix spike was analyzed with this batch. The total propagated uncertainty on the matrix spike result is approximately equivalent to the spike level due to the high level of sample activity (matrix effect). The matrix spike is accepted and reported with the low resultant spike yield (49.2%). The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM7) results are within contractual requirements.

Tritium by method ITAS-RD-3205

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNN9) results are within contractual requirements.

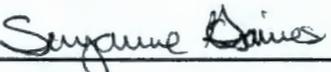

**Total Uranium**

Total Uranium by method ITAS-RD-4200

The sample batch was reanalyzed due to quality control sample failure. The reanalysis results are accepted and reported. Two matrix spikes were analyzed with the batch. No matrix spike yield correction of the sample results was performed. The LCS, batch blank, sample and sample duplicate (duplicate of B0BRL3) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. **DATA QUALITY OBJECTIVES**

The data quality objectives for 200-BP-5 Groundwater Operable Unit are specified in the *Quality Assurance Program Plan for the 200-BP-5 Groundwater Operable Unit* (DOE/RL 88-32, Rev. 1).

**DATA QUALITY OBJECTIVES (cont.)**

The primary objective of the data validation effort was to ensure these data quality objectives were met, and that the data are usable and defensible. This was accomplished through a detailed examination of the data package to recreate the analytical process and verify that proper and acceptable analytical techniques had been applied. The data package was checked for correct submission of required deliverables, correct transcription of raw data to the summary forms, and for proper calculation of a number of parameters.

**Precision.** Goals for precision were met with the exception of iron.

**Accuracy.** Goals for accuracy were met with the exception of cyanide, bismuth and selenium.

**Sample Result Verification.** All sample results were supported in the raw data.

**Detection Limits.** Detection limits goals were met for all sample results as specified in the work plan (DOE/RL 88-32).

**Completeness.** The data package was 96% complete for all requested analyses.

Data qualifiers are assigned to any results that have been determined to be deficient. These are discussed below.

**MAJOR DEFICIENCIES (REJECTED DATA)**

The following major deficiencies resulted in the qualification of the results as unusable.

**METALS**

- Cyanide was qualified as unusable (UR) for samples BOBNP7 and BOBNP3 for exceeding the maximum holding times by greater than 2 times.

**GENERAL CHEMISTRY**

- IC anions  $\text{NO}_2$  and  $\text{PO}_4$  were qualified unusable (UR) for exceeding the holding time requirement by more than 2 times.

## MINOR DEFICIENCIES

The following minor deficiencies were discovered. These minor shortcomings are not expected to significantly affect the overall quality of the data.

### METALS

- Samples BOBNM5 and BOBNN9 were qualified as estimated (J) for missed holding times for cyanide.
- Iron was qualified as non-detect (U) for positive preparation blank contamination for samples BOBNP1 and BOBNP2.
- Potassium was qualified as non-detect (U) for positive blank contamination for sample BOBRL7.
- Selenium was qualified as non-detect (U) for positive blank contamination for samples BOBNP7, BOBNP3, BOBNP4, BOBNM5, and BOBNM6.
- Iron was qualified as estimated (J/BJ) for duplicate RPDs greater than 20% for samples BOBNM5, BOBNM6, BOBNP3, BOBNP4, BOBNP7, and BOBNP8.
- Cyanide results for samples BOBNN9 and BOBNM5 were qualified as estimated (J) for LCS recoveries outside 80-120%.
- Selenium and bismuth were qualified as estimated for low analytical spike recovery for sample BOBNP0 (UJ for bismuth), for sample BOBNP7, BOBNP8, BOBNP3, and BOBNP4 (J/UJ for selenium).

### GENERAL CHEMISTRY

- No deficiencies were observed.

### RADIOCHEMISTRY

- BOBRL3 was qualified as non-detect (U) due to uranium being detected in the blank.

**COMMENTS**

- Several sample result forms were marked by the lab with an asterisk for duplicate RPD outside acceptance criteria for iron. Examination of the prep and run logs revealed the application of these qualifiers were erroneous for some samples. In these cases, the lab qualifiers have been crossed-out.
- Only fluoride and sulfate were reported for IC anions for samples BOBNM7, BOBNP1, and BOBNN9. Chloride, phosphorous, and nitrite were requested, analyzed, but not reported by the laboratory. The Form 1's were edited by the validator.
- BOBRL7 and BOBRL8 were field duplicate samples. Only the metals analyses were performed on these samples. The RPD comparison between BOBRL7 and BOBRL8 was acceptable .
- Page 19 of the ITC data package has a U-total RPD that was calculated using data that had been rejected by the laboratory. On page 24 of the ITC data package, the correct RPD comparison is reported. Pages 19 and 24 are included in the checklist. All U-total data was thoroughly checked for data entry errors.
- The sulfate analysis for sample BOBRL7 by method 375.4 was cancelled per WHC (see record of disposition on page 178a). As a result, there is no Form 1 for sulfate by this method. The result originally reported on page 18 was a false entry and has been deleted from the Data Summary Table.
- Sample BOBNP1 was received at the laboratory at pH 10. A pH of 12 or higher is required by the CLP protocol to ensure that the cyanide remains in solution as the CN anion and does not evolve as HCN, a gas. Consequently, all samples improperly preserved or received at a pH less than 12 are subject to a low bias for the cyanide analysis. However, the WHC validation procedure does not allow qualification due to a low pH. Only missed holding times can warrant the qualification of data according to the validation procedure. Preservation deficiencies cannot warrant qualification.

**DATA VALIDATION APPLIED QUALIFIERS**

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows.

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ- Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during data validation, the associated quantitation limit is an estimate.
- J- Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision making purposes.
- BJ- Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.
- R- Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency the data are unusable.
- UR- Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data are unusable due to an identified QC deficiency.
- JN- Indicates a tentatively identified compound (TIC) that has been determined to be valid in terms of identification and quantitation.
- UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.
- NJ- Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific application (i.e., usable for decision making purposes).
- N- Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision making purposes).

**LABORATORY APPLIED QUALIFIERS**

Qualifiers which may be applied by the laboratory in compliance with applicable requirements are as follows.

**Organic Data Qualifiers**

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- J- Indicates an estimated value. This flag is used when estimating concentrations of tentatively identified compounds (TICs) or when the presence of a TCL compound is confirmed at a concentration of less than the CRQL but greater than the IDL.
- N- Indicates presumptive evidence of a compound. This flag is used only by the laboratory for TIC results when the identification is based on a mass spectral library search.
- P- This flag is used for pesticide/Aroclor target analytes when there is greater than 25% difference for detected values between the quantitation and confirmation GC columns. The lower of the two concentrations is reported on the report form and the result is flagged with a "P".
- C- This flag applies to pesticide results where the identification has been confirmed by GC/MS. This flag should not be used by the laboratory if GC/MS confirmation was attempted but unsuccessful, in which case, the laboratory should use an "X" flag as defined below. The "X" flag is then defined in the SDG narrative.
- B- This flag applies to results in which the analyte was detected in both the sample and the associated blank. The combination of the "B" flag with the "U" flag ("BU" or "UB") is expressly prohibited in the analytical SOW.
- E- This flag identifies compounds whose concentrations exceed the calibrated range of the GC/MS instrument.
- D- This flag identifies compounds identified in an analysis at a secondary dilution factor.
- A- Indicates a TIC which is a suspected aldol-condensate product.
- X- This is a non-specific flag used to properly define the results. If used, this flag must be properly defined within the body of the SDG.

**LABORATORY APPLIED QUALIFIERS****Inorganic Qualifiers**

- U- Indicates the analyte was analyzed for but not detected in the sample.
- B- Indicates the analyte concentration is less than the CRDL but greater than the IDL.
- E- Indicates the value reported is estimated due to the presence of interference.
- M- Indicates duplicate injection precision criteria were not met during graphite furnace (GFAA) analysis.
- N- Indicates spiked sample recovery was not within the control limits.
- S- Indicates the reported value was determined by the Method of Standard Additions (MSA).
- W- Indicates post-digestion spike for GFAA analysis is outside control limits and the sample absorbance is less than 50% of the spike absorbance.
- \*- Indicates duplicate analysis was not within control limits.
- + - Indicates the correlation coefficient (r) for the MSA was less than 0.995.

## LATA INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

## VALIDATION SUMMARY

## MAJOR DEFICIENCIES:

Cyanide was qualified UR for samples BOBND7 and BOBND3 for exceeding the maximum hold times by > 2 times

## MINOR DEFICIENCIES:

- 9-15-04  
WJC
- Samples BOBND5, NP6, NP4, and NP9 qualified estimated for missed hold times for CR.
- Iron was qualified U for positive prep blank contamination for samples BOBND1 and BOBND2
- Potassium was qualified U for positive blank contamination for BOBND1
  - Selenium was qualified U for positive blank contamination for samples BOBND7, NP3, NP4, NP5 and NP6
  - Iron was qualified as estimated <sup>(3, 83)</sup> for duplicate RPDs > 20% for samples BOBND5, NP6, NP3, NP4, NP7 and NP8.
- Cyanide results for samples BOBND9 and BOBND5 were qualified as estimated for LCS recoveries outside 80-120%
- Selenium and bismuth were qualified estimated for low analytical spike recoveries for samples BOBND0 (U, Bi), Se BOBND7 (J), NP8 (U), NP3 (J) and NP4 (S)

## COMMENTS:

Several sample result forms were marked by the lab with an asterisk for duplicate RPD for iron. Examination of the prep and run logs revealed that the application of these qualifiers was erroneous for some samples. In these cases, the lab qualifiers have been crossed-out.

2. HOLDING TIMES (see HOLDING TIME SUMMARY form)

Are sample holding times acceptable? ..... Yes **No** N/A

Comments: *The NO<sub>2</sub> & PO<sub>4</sub> IC Anions exceeded the required holding time for a liquid sample. BOBNM7, BOBNP1, & BOBNN9 have only Fluoride & Sulfate reported for the IC Anions Analysis. PO<sub>4</sub><sup>-</sup>, Cl<sup>-</sup>, NO<sub>2</sub><sup>-</sup> (IC) reported by MW 9-16-94*

3. INSTRUMENT CALIBRATION (see CALIBRATION DATA SUMMARY form)

- Was initial calibration performed for all applicable analyses?  Yes No N/A
- Are initial calibration results acceptable?  Yes No N/A
- Was a calibration check performed for all applicable analyses?  Yes No N/A
- Are calibration check results acceptable?  Yes No N/A

★ For methods requiring a calibration curve (three standards and a blank) use the following equation for correlation coefficient (r).

$$r = \frac{\text{Correlation Coefficient (r)} \quad N \sum x_i y_i - \sum x_i \sum y_i}{[N \sum x_i^2 - (\sum x_i)^2]^{1/2} [N \sum y_i^2 - (\sum y_i)^2]^{1/2}}$$

★ For methods requiring ICV/CCV or a calibration check standard, calculate recovery as follows:

$$\%R = \frac{\text{Recovery observed value}}{\text{true value}} \times 100$$

Comments: Sulfate and NO3NO2 calibrations yield correlation coefficients > 0.995. IC Anions calibration fit to a coefficients of least squares fit to a quadratic equation - unable to check. The %Ds for IC Anions are less than 10%.

Linearity (R<sup>2</sup>) checked for IC MW 9-16-94 (used calculator R<sup>2</sup> > .995 and acceptable)

8. ANALYTE QUANTITATION

Was analyte quantitation performed properly?  Yes No N/A
Are results calculated properly?  Yes No N/A

★ For methods with calibration curves:

General Chemistry Results Calculation, water sample

Concentration (µg/L) = CONCW x DfW

where:

CONCW = concentration off calibration curve (µg/L)

DfW = dilution factor (if any)

or

General Chemistry Results Calculation, soil sample

Concentration (mg/Kg) = (CONCS x DfS x VOL) / (WS x SS)

where:

CONCS = concentration off calibration curve (mg/L)

VOL = volume of final extract (ml)

WS = weight of sample (g)

DfS = dilution factor (if any)

SS = dry weight conversion [(100 - %moisture) x 100 ]

## VALIDATION SUMMARY

MAJOR DEFICIENCIES: 10 Anions  $\text{NO}_2^-$  &  $\text{PO}_4$  qualified UR for exceeding the holding time requirement by more than 2 x 2 days.

Nitrite's Phosphate for all samples were qualified as unusable due to exceeding the holding time mid 9-16-94

MINOR DEFICIENCIES: None

COMMENTS: Fluoride + Sulfate only reported for 10 Anions samples BOBNM7, BOBNP1, & BOBNN9.

Nitrite, Chloride's Phosphate was analyzed by the laboratory, but did not get reported on the Form 1's. Form 1's are edited to include data. Nitrite's Phosphate exceeded the holding time > 2 times & were qualified as UR

### DATA VALIDATION SUMMARY

#### MAJOR DEFICIENCIES:

1. None

#### MINOR DEFICIENCIES:

1. BOBRL3 is qualified as non-detect (U) due to uranium being detected in the method blank.

#### COMMENTS:

1. BOBRL7 is identified as a field duplicate sample. It is a duplicate with BOBRL8. BOBRL8 did not have wet chemistry analyses.
2. Page 19 of the data package contains uranium data from the first analysis, which was rejected. This should not have been reported by the laboratory. The correct RPD comparison can be found on page 24 of the data package. All U-total data was checked for entry errors.

SDG:	W0038
Client Project ID:	WHC SAF-94-130 200-BP-5 Groundwater-Round-1
Date Received by Lab:	April 19, April 22, April 25, April 27 and April 29, 1994
Number of Samples:	Twenty (20)
Sample Type:	Water

---

### I. Introduction

On April 19, April 22, April 25, April 27 and April 29, 1994, twenty (20) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. Sample BOBNP1 was received with a pH of 10. See attached CUR #1486. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

### II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

## II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for sulfate based on EPA method 375.4.

The alkalinity of the samples was determined using EPA method 310.1.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

## III. Quality Control

The samples for work order #388 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 6 through May 14, 1994; the remaining metals were analyzed by ICP on May 6, 1994. All run QC was acceptable. Samples were batched with QC from work order #379. The initial calibration verification standard/LCS and continuing calibration verification standard for cyanide were outside acceptance limits on the high side. However, as no cyanide was detected in the sample this does not adversely affect the results. The linear range for silicon was determined on May 24, 1994.

The samples for work order #418 were digested on May 20, 1994 for ICP and May 5, 1994 for GFAA. The GFAA analyses for selenium and bismuth were performed on May 11 and May 24, 1994; the remaining metals were analyzed by ICP on May 24, 1994. All run QC was acceptable. Samples were batched with QC from work order #379. The LCSW/ICV for cyanide exceeded acceptance criteria by 3%.

The samples for work order #428 were digested on May 26, 1994 for ICP and May 10, 1994 for GFAA. The GFAA analyses for selenium and bismuth were performed from May 12 through May 16, 1994; the remaining metals were analyzed by ICP on June 1, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNP7 and BOBNP8. Spike recovery (accuracy) results were within acceptance limits for all requested parameters. As the silicon concentration in sample BOBNP8 was greater than four times (4X) the spike added, spiking criteria did not apply for this analyte. Duplicate RPD (precision) results were within acceptance limits for all requested parameters except for iron by ICP analysis on sample BOBNP7. Poor precision for this analyte appears to be attributable to contamination during sample preparation. The samples were analyzed for cyanide outside of holding time due to original analysis results missing one sample and to confirm positive value on sample BOBNM5.

### III. Quality Control (Continued)

The samples for work order #439 were digested on May 11, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 12 through May 16, 1994; the remaining metals were analyzed by ICP on May 24, 1994. All run QC was acceptable. The ICV/LCS for cyanide was outside acceptance limits on the high side by 3%. No cyanide was detected in the samples. The samples were batched with QC from work order #428.

The samples for work order #455 were digested on May 12, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 16 through May 20, 1994; the remaining metals were analyzed by ICP on June 2, 1994. All run QC was acceptable. The ICV/LCS for cyanide was slightly outside acceptance limits on the high side. As the samples contained this analyte slightly above the CRDL, it should be noted that the sample results may be partially elevated. The samples were batched with QC from work order #428.

Data were reported with qualifiers as follows:

#### "C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

#### "O" Qualifiers

- \* - Duplicate analysis outside control limits.
- N - Spiked sample recovery outside control limits.
- W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
- S - The reported value was determined by method of standard additions.

#### "M" Qualifiers

- P - Analysis performed by ICP.
- V - Analysis performed by CVAA.
- F - Analysis performed by GFAA.
- C - Cyanide analysis by manual distillation/colorimetric determination.

#### Miscellaneous

- D - Duplicate.
- S - Spike.
- NR - Not required.
- G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
- X - Detection limits higher than normal due to sample matrix interferences.

## II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

### **Alpha Spectroscopy**

Plutonium-238, -239/40 by method ITAS-RD-3209

### **Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

### **Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Gross Beta by method ITAS-RD-3222

Strontium-90 by method ITAS-RD-3204

### **Liquid Scintillation Counting**

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

### **Total Uranium**

Total Uranium by method ITAS-RD-4200

## III. Quality Control

The analytical results for each analysis performed under SDG W0038 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

## IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

### **Alpha Spectroscopy**

#### Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNP3) results are within contractual limits.

### **Gamma Spectroscopy**

#### Gamma Scan by method ITAS-RD-3219

The detection limit for Eu-152 was not met on the first count of samples (B0BNN9) and (B0BNP5). The detection limits were achieved for all analytes on the recount. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNP7) results are within contractual limits.

### **Gas Proportional Counting**

#### Gross Alpha by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM5) results are within contractual limits.

#### Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM5) results are within contractual limits.

#### Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM7) results are within contractual requirements.

### **Liquid Scintillation Counting**

#### Technetium-99 by method ITAS-IT-RS-0001

One matrix spike was analyzed with this batch. The total propagated uncertainty on the matrix spike result is approximately equivalent to the spike level due to the high level of sample activity (matrix effect). The matrix spike is accepted and reported with the low resultant spike yield (49.2%). The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM7) results are within contractual requirements.

Tritium by method ITAS-RD-3205

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNN9) results are within contractual requirements.

**Total Uranium**

Total Uranium by method ITAS-RD-4200

The sample batch was reanalyzed due to quality control sample failure. The reanalysis results are accepted and reported. Two matrix spikes were analyzed with the batch. No matrix spike yield correction of the sample results was performed. The LCS, batch blank, sample and sample duplicate (duplicate of B0BRL3) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above.
