Waste Site Reclassification Form

<b>Date Submitted:</b> 8/3/1998	<b>Operable Unit(s):</b> 300-FF-2	<b>Control Number:</b> 98-041
<b>Originator:</b> C. E. Corriveau, Jr., MSIN H0-17	<b>Waste Site ID:</b> 300-66	
<b>Phone:</b> 372-9565	<b>Type of Reclassification Action:</b> Rejected <input checked="" type="radio"/> Closed-Out <input type="radio"/> No Action <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

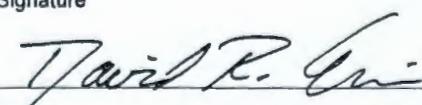

**Description of current waste site condition:**

The site is an open concrete french drain. Two pipes exit from about the ceiling level of the 303J Building and discharge to the drain. The concrete drain is filled with sand and small rocks and it does not appear to have been used recently. Although the current "Inventory of Miscellaneous Streams", Revision 3 lists the site as active.

**Basis for reclassification:**

The HVAC system generates condensate on the coils from the air. The condensate is collected by the HVAC unit and it is drained to the french drain.

The site is active and receives less than 0.038 liters (0.01 gallons) per minute HVAC condensate only. Disposal structures meeting the definition of "underground injection control", as stated in WAC 173-218, are registered (listed) as underground injection wells. This site is exempt from permitting under WAC 173-216 because Ecology considers the WAC 173-218 registration to be sufficient for sites that received steam condensate only.
