

WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-025

Waste Site Code(s)/Subsite Code(s):

216-B-64

Reclassification Category: Interim Final
Reclassification Status: Closed Out No Action Rejected
 RCRA Postclosure Consolidated None
Approvals Needed: DOE Ecology EPA

Description of current waste site condition:

(What is the current physical state of the site? What activities have been performed?)

The 216-B-64 waste site is a sub-grade retention basin structure consisting of two rubber bladder-lined sections covered with a concrete roof. The retention basin was constructed to serve as an emergency diversion basin for contaminated steam condensate from B Plant. This waste stream was routinely discharged to the 216-B-55 crib, and the basin was never used for diverted waste.

The pump pit associated with the basin has been backfilled with clean soil, but the basin structure remains intact and uncovered. The area around the basin has been covered with soil as a result of stabilization activities for the partially co-located UPR-200-E-64 waste site.

Basis for reclassification:

(How does the site meet the reclassification status?)

The site was previously reclassified to interim no action in 2004. Because the site was never used for waste handling or disposal, this reclassification is being revised to "rejected" to align with the current TPA-MP-14 procedure. The pipeline system associated with the basin was classified as "not accepted" during site discovery/identification in 2011.
