Summary of Discussion

**Unit Managers Meeting:
303-K Mixed Waste Storage Facility**

August 19, 1992

The meeting opened at 2:30 p.m.

Status of Ecology's review of the NOD response table: Ecology stated that the closure plan is still under review. Since Ecology and RL/WHC are deadlocked regarding several matters, Ecology suggested that the delivery of the NOD responses be delayed pending the upcoming issue resolution meeting between Ecology, EPA, and DOE. Attending unit managers agreed to delay the delivery of the NODs by Ecology.

New Business: Ecology offered a solution regarding appropriate methods for determining the waste designation of potentially contaminated concrete/asphalt. Ecology requested that RL/WHC present a written justification for using the TCLP extraction method when analyzing for potential inorganic contamination in concrete. The TCLP extraction method is necessary because inorganic constituents may be naturally present within the concrete/asphalt at total concentrations (i.e. leachable by strong acid) which would render the concrete/asphalt a dangerous waste.

New Action Item: RL/WHC (F. Ruck) will evaluate Ecology's proposal regarding concrete/asphalt testing for determination of waste designation (8-19-92:1).

The meeting concluded at 3:00 p.m.

The next Unit Managers Meeting was scheduled for September 17, 1992, at 9:30 a.m., in Lacey, WA.
