This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

(Summarize status of investigation/remediation of the waste sites.)

Two salt-dissolving pits were part of a single below-grade concrete structure that provided sodium chloride brine used to regenerate the zeolite ion exchange demineralizers that were part of the water treatment system for the 184-D Power House. Each pit had inner dimensions of 4.3 m x 2.4 m x 2.8 m (14 ft x 8 ft x 9.25 ft) deep. The facility was demolished and buried in situ in 1988. Demolition or sampling results are discussed in Griffin, P.W., 1988, *184-B Powerhouse, 184-D Powerhouse, 1717-F Maintenance Shop Facility Decommissioning Report*, SD-DD-TI-033, Westinghouse Hanford Company, Richland, Washington. The site currently appears as a cobble-covered area located adjacent to railroad tracks at the former location of the 184-D Power House.

Basis for reclassification:

(For closeout, reference supporting documentation, as listed in Table 2-3.)

Site is a Waste Management Unit but not a waste disposal unit. No other regulatory authorities apply Sodium chloride in the form and concentration which may exist on site is not a hazardous waste, is nondangerous and nonradioactive.
