Ms. J. A. Hedges, Program Manager
Nuclear Waste Program
State of Washington
Department of Ecology
3100 Port of Benton
Richland, Washington 99354

RECEIVED
FEB 14 2008
EDMC

Dear Ms. Hedges:

RESOLUTION OF DISPUTE CONCERNING HANFORD FEDERAL FACILITY AGREEMENT AND CONSENT ORDER (TRI-PARTY AGREEMENT) INTERIM MILESTONE M-91-03 TRANSURANIC MIXED/MIXED LOW-LEVEL WASTE PROJECT MANAGEMENT PLAN (PMP) HNF-19169, REVISION 3

The purpose of this letter is to respond to the September 26, 2007, issues identified by the State of Washington Department of Ecology (Ecology) "Disapproval of the United States Department of Energy (USDOE) Revised M-91-03 Milestone Transuranic (TRU) Mixed/Mixed Low-Level Waste Project Management Plan (PMP), HNF-19169, Revision 3." This response is intended to gain approval of the August 2007 PMP submittal and resolve the on-going project manager level dispute concerning approval.

The first issue involves Ecology's request to include potential waste volumes from future Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) cleanup activities in the PMP. Based on the agreements reached during discussion between the Tri-Party Agreement project managers, the U.S. Department of Energy (DOE), Richland Operations Office (RL) agrees that future PMP submittals, starting with the June 2008 submittal, will include an appendix that identifies volumes of transuranic mixed waste that could result from future CERCLA actions. A preliminary draft format of this appendix has been discussed with your staff and is attached. The project managers understand that the volumes that will be provided are estimates and are subject to change depending on future remediation decisions. The intent is to update the data annually as part of the annual PMP update.

The second issue requested a description of "which project will provide waste management support" for disposition of wastes generated during cleanup activities. Responsibility for management of future generated wastes will depend on a number of factors including the contract structures in place at the time of the activity. Regardless, DOE will oversee future cleanup activities to ensure they are integrated between the different projects to ensure the work is executed as efficiently as possible. For example, a specific area where Ecology staff have indicated concerns is disposition of wastes generated during remediation of the 618-10/11 Burial

FEB 12 2008

Grounds. The work scope is currently contracted with Washington Closure Hanford LLC (WCH). Integration between the different DOE and contractor waste management projects has been on-going. Monthly meetings were held during the development of the design solution for the remediation of the 618-10/11 Burial Grounds. In addition, an RL review team with subject matter experts from different organizations reviewed the design solution. Currently plans are being developed for further characterization activities needed to refine the design solution. Forecasts of transuranic waste anticipated to result from the 618-10/11 remediation project are updated annually in the Solid Waste Integrated Forecast Technical (SWIFT) Report. This SWIFT data with annual 618-10/11 updates is used in the development of the annual updates of the PMP. A similar approach would be taken to incorporate or update other waste source volumes in the PMP update process with the SWIFT forecast being the main source of future waste volume projections.

In order to resolve this dispute please respond by approving the August 2007 PMP. A response indicating approval of the August 2007 PMP submittal will end the dispute.

If you have any questions, please contact me, or your staff may contact Matt McCormick, Assistant Manager for the Central Plateau, on (509) 373-9971.

Sincerely,

David A. Brockman
Manager

**Estimates of Hanford CERCLA Waste Sites Containing Transuranic Constituents
Greater than 100 nCi/g**

CERCLA Sites	Area (acres) ^a	Estimated Volume (m ³)
		Potential Amount of Material Greater than 100 nCi of Transuranic Constituents/g
Contaminated Soil Sites (from Liquid Disposal)		
Landfills ^{bc}		
Canyon Facilities and Associated Tunnels	-	
Tanks and Ancillary Equipment	-	
Other 200 Area		
100 Area and 300 Area		

^a Includes area of entire contaminated soil site or landfill

^b The estimated volumes are from historical Solid Waste Inventory Tracking System (SWITS) data and DOE/RL-2004-60 Draft B, *200-SW-1 Nonradioactive Landfills and Dumps Group Operable Unit and 200-SW-2 Radioactive Landfills and Dumps Group Operable Unit Remedial Investigation/Feasibility Study Work Plan*, September 2007.

^c 618-10 and 618-11 landfills are not included. These sites are included in M-91 forecasts
