

## Waste Site Reclassification Form

<b>Date Submitted:</b> 6/2/2004	<b>Operable Unit(s):</b> 200-UR-1	<b>Control Number:</b> 2004-071
<b>Originator:</b> C. R. Webb	<b>Waste Site ID:</b> UPR-200-E-140	
<b>Phone:</b> 373-5573	<b>Type of Reclassification Action:</b>	<b>Form Status:</b> Not Approved
	<b>Rejected:</b> <input type="radio"/> <b>No Action:</b> <input checked="" type="radio"/> <b>Interim Closed Out:</b> <input type="radio"/> <b>Closed Out:</b> <input type="radio"/>	

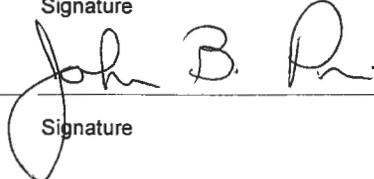

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

**Description of current waste site condition:**

UPR-200-E-140 occurred on April 23, 1986. Less than 7.6 liters (2 gallons) of oil containing between 1 to 38 parts per million of polychlorinated biphenyl (PCB) was spilled to the ground at the southwest corner of the 211-B Bulk Storage Area.

**Basis for reclassification:**

The release site is not marked or posted. The Hanford Site Waste Management Units Report (1987) states that no further potential for release exists. The PCB contamination was removed in 1986. Later, in August and September 1991, all the asbestos insulation on the 211-B tanks and lines was removed. Due to a concern regarding asbestos in the soil, the top 10 centimeters (4 inches) of soil was removed from the area. Soil samples were taken around pumps, instrument cabinets, switch gears, french drains and valves. The entire excavated area was capped. The site is recommended for reclassification to No Action.
