Dear J.A. Lerch

Thank you for purchasing analytical testing services from IT Corporation. It is our intention to supply our clients with data packages which not only meet the industry's highest standards for quality, but are also easy to use. Features which we point out are:

1. A Data Summary Packet which allows you to review your data without searching through the complete data package.

Your Data Summary Packet contains the following items:

- Case Narrative: listing of sample identifications, analyses performed, explanation of any problem associated with samples, corrective action taken.
- Quality control sample identifications and analyses performed.
- Data summary.

2. A data package which meets the specific requirements you requested and is easy to use as well. The package is organized in accordance with the Table of Contents which you will find at the beginning of each section. Sections are separated by color-coded tabs, making it easy to find individual analytical parameters which may be of particular interest to you. The data package is custody-sealed at the laboratory - your assurance that parts of the package are not missing.

We are constantly searching for ways to improve our service to you. This current product has many of the features which you have told us are important to you. Your suggestions regarding additional improvements will be appreciated.

Please contact me with any questions or suggestions.

I. Introduction

On June 7 and June 9, 1994, twelve (12) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report. One container for sample BOBMQ2 Pest/PCB was received broken. The analysis was taken from the other container. Samples BOBMQ2, BOBMV6 and BOBMP8 for cyanide were received at pH 10.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Compound List (TCL) volatiles and semivolatiles by gas chromatography/mass spectroscopy (GC/MS) in accordance with the EPA CLP 3/90 Statement of Work.

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Compound List (TCL) pesticides and PCBs by gas chromatography/electron capture detection (GC/ECD) in accordance with the EPA CLP 3/90 Statement of Work.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

The samples were analyzed for total cyanide in accordance with the EPA CLP ILM03 Statement of Work.

The alkalinity of the samples was determined using EPA method 310.1.

The samples were analyzed for ammonia based on EPA method 350.2.

The samples were analyzed for chemical oxygen demand (COD) at the ITAS ST. Louis laboratory based on EPA method 410.2. A copy of their report is enclosed.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The pH of the samples was determined using EPA methods 150.1 and 9040.

The specific conductance of the samples was measured using EPA method 120.1.

The samples were analyzed for sulfide based on EPA method 376.1.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

The samples were analyzed for total organic carbon (TOC) based on EPA methods 415.1 and 9060.

The samples were analyzed for total organic halogens (TOX) based on EPA method 9020A.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. All QC results met method specified limits. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMQ2. The analysis of the matrix spike duplicate for sample BOBMQ2 was performed twenty-five minutes outside of holding time. The results for this sample compared well to the matrix spike results.

III. Quality Control (Continued)

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5⁺ capillary column on a Finnigan 4500 GC/MS/DS. The recovery for surrogate standard 2,4,6-tribromophenol was high in samples BOC1G5 and BOBMQ2 MSD. These results are acceptable for this method. The percent recovery for 4-nitrophenol and pentachlorophenol were high for both the matrix spike and matrix spike duplicate of sample BOBMQ2.

Data were reported with qualifiers as follows:

- U - Compound analyzed for but not detected; value given is quantitation limit.
- E - Compound exceeded calibration range.
- D - Compound analyzed at a secondary dilution factor.
- J - Compound detected but below quantitation limit; value estimated.
- S - Spiked compound.
- B - Compound found in method blank.
- A - Suspected aldol condensation product.
- Y - Indistinguishable isomer in tentatively identified compounds.
- N - Presumptive evidence of compound presence.

The samples for work order #621 were digested on June 15, 1994 for ICP and June 15, 1994 (June 22, 1994 - Lead) for GFAA. The CVAA analysis for mercury was performed on June 23, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 16 through June 28, 1994; the remaining metals were analyzed by ICP on July 1, 1994. All run QC was acceptable. A duplicate and a spike were analyzed using sample number BOBMQ2 (total) and BOBMQ3 (dissolved). Spike recovery (accuracy) results were within acceptance limits for all parameters for both samples except for lead indicating matrix interferences. Duplicate RPD (precision) results were within acceptance limits for all parameters.

The samples for work order #633 were digested on June 15, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 23, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 16 through June 22, 1994; the remaining metals were analyzed by ICP on July 5, 1994. All run QC was acceptable. Samples were batched with QC from work order #621.

Data were reported with qualifiers as follows:

"C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

I. Introduction

On June 6 and 8, 1994, three water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

<u>ITAS-Richland ID</u>	<u>WHC ID</u>	<u>Matrix</u>	<u>Date of Receipt</u>
406072-01A	BOBMQ2	Water	6/6/94
406137-01A	BOBMV6	Water	6/8/94
406137-02A	BOBMP8	Water	6/8/94

II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

III. Quality Control

The analytical results for each analysis performed under SDG W0082 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

Alpha Spectroscopy

Americium-241 by method ITAS-RD-3302

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMQ2) results are within contractual limits.

Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMQ2) results are within contractual requirements.

Liquid Scintillation Counting

Carbon-14 by method ITAS-RD-3247

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMV6) results are within contractual requirements.

Technetium-99 by method ITAS-IT-RS-0001

The SDG was grouped into two batches for analysis, however, only one set of quality control samples will be billed to this SDG. In both analytical batches, the matrix spike, LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMQ2 and sample BOBMP8) results are within contractual requirements.

Tritium by method ITAS-RD-3205

SDG W0082 was batched and analyzed with SDG W0090. Quality Control Samples were prepared and analyzed for each SDG. The LCS (L060721S and L060721M), batch blank (L060721X), sample and sample duplicate (duplicate of sample BOBMQ2) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Data Validation Narrative**

INTRODUCTION

All samples in Sample Delivery Group (SDG) W0082-ITC-096 were validated at level "D" as defined in the Data Validation Procedures for Chemical Analysis (WHC-SD-EN-SPP-002) and/or Data Validation Procedures for Radiochemical Analyses (WHC-SD-EN-SPP-001).

The data package was received by Los Alamos Technical Associates (LATA) on August 11, 1994. Validation began on August 26, 1994 and was completed on September 12, 1994.

The chemical and radiochemical analyses were performed by ITC.

ANALYSES REQUESTED

ANALYSES REQUESTED (cont.)

The WHC ROD (included with this report in the Chain-of-Custody section) states that the 7 day holding time for the semi-VOA, PCB/Pests, TDS, and Sulfide analyses for sample BOBMP0 were missed and the Chain-of-Custody for sample BOBMP2 was incomplete (the Chain-of-Custody was broken. J. M. Ayers of WHC instructed the laboratory not to perform analyses for which holding times have been missed (replacement aliquots for these analyses will be collected, shipped, analyzed, and reported under BOB1G5). He also instructed the laboratory to continue with the analysis of BOBMP2 for "informational purposes only".

DATA QUALITY OBJECTIVES

The data quality objectives for 100-FR-3 Groundwater Operable Unit are specified in the *Remedial Investigation/Feasibility Study Work Plan for the 100-FR-3 Operable Unit* (DOE/RL-91-53, Rev 0). Precision, accuracy, and detection limit requirements for the project have been derived from the Third Edition of SW-846 (EPA, 1992). Maximum holding times are listed in the 3rd Edition, Final Update I of SW-846 (EPA, July 1992).

The primary objective of the data validation effort was to ensure these data quality objectives were met, and that the data are usable and defensible. This was accomplished through a detailed examination of the data package to recreate the analytical process and verify that proper and acceptable analytical techniques had been applied. The data package was checked for correct submission of required deliverables, correct transcription of raw data to the summary forms, and for proper calculation of a number of parameters.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limits goals were met for all sample results as specified in DOE/RL-91-53, Rev 0.

Completeness. The data package was 99% complete for all requested analyses.

Data qualifiers are assigned to any results that have been determined to be deficient. These are discussed below.

MAJOR DEFICIENCIES (REJECTED DATA)

The following major deficiencies resulted in the qualification of the results as unusable.

GENERAL CHEMISTRY

- The holding time for phosphate (IC) was exceeded by greater than two times. Therefore, the phosphate (IC) results for samples BOBMQ2, BOBMV6, and BOBMP8 were qualified as unusable (UR).

MINOR DEFICIENCIES

The following minor deficiencies were discovered. These minor shortcomings are not expected to significantly affect the overall quality of the data.

VOLATILES

- The method blank had positive values with associated sample results less than 10x the blank result for common laboratory contaminants. Therefore, the Methylene Chloride and Acetone results for samples BOBMQ2, BOBMQ4, BOBMV6, BOBMV8, BOBMN8, BOBMN9, BOBMP8, and BOBMQ0 were qualified non-detects (U).
- The method blank had positive values with associated sample results less than 5x the blank result. Where sample results were less than the CRQL, an upward adjustment to the CRQL (10ug/L) was made. Therefore, the Chloroform results for samples BOBMQ2, BOBMQ4, BOBMV6, BOBMV8, BOBMN8, BOBMN9, BOBMP8, and BOBMQ0 were qualified non-detects (10U).
- The %D between the initial and continuing calibration exceeded 25%. Therefore, the 1,1,1-Trichloroethane and Carbon Tetrachloride results for samples BOBMQ2, BOBMQ4, BOBMV6, BOBMV8, BOBMN8, BOBMN9, BOBMP8, and BOBMQ0 were qualified as estimated (UJ).

MINOR DEFICIENCIES (cont.)**VOLATILES****COMMENTS**

- A laboratory-generated trip blank was shipped with the WHC samples from Richland to Knoxville for analysis. Trip blank contamination consistent with that found in the method blank indicates that the source of the contamination is the laboratory performing the analysis and not the trip between laboratories.

SEMIVOLATILES

- The %D for the continuing calibration verification exceeded the upper control limit. Therefore, the Hexachlorobenzene results for samples BOBMP8, BOBMQ2, BOBMV6, and BOC1G5 were qualified as estimated (UJ).

PESTICIDES/PCBS

- No deficiencies were observed.

METALS

- The matrix spike and matrix spike duplicate recoveries for accuracy were less than 75% and greater than 30%. Therefore, the lead results for samples BOBMQ2, BOBMQ3, BOBMP8, BOBMP9, BOBMV6, and BOBMV7 were qualified as estimated (J/UJ).
- The analytical spike recovery for graphite furnace was outside acceptance criteria. Therefore, the selenium result for sample BOBMV6 was qualified as estimated (J).
- The calibration blank values were between the IDL and the CRDL with associated sample results less than 5x the highest blank concentration. Therefore, the manganese results for samples BOBMP8 and BOBMP9 were qualified as non-detects (U).
- The preparation blank values were between the IDL and the CRDL with associated sample results less than 5x the highest blank concentration. Therefore, the iron results for samples BOBMQ2, BOBMQ3, BOBMP8, BOBMP9, BOBMV7, and BOBMV7 were qualified as non-detect (U). The lead results for samples BOBMQ2, BOBMP9, and BOBMV6 were qualified as non-detect (U). The zinc results for samples BOBMQ2, BOBMQ3, BOBMP8, BOBMP9, BOBMV6, and BOBMV7 were qualified as non-detects (U).

MINOR DEFICIENCIES (cont.)GENERAL CHEMISTRY

- The matrix spike and matrix spike duplicate recoveries for accuracy were less than 75% and greater than 30%. Therefore, the total organic halogen results for samples BOBMQ2, BOBMV6, and BOBMP8 were qualified as estimated (J/UJ).
- The holding time for pH was exceeded. Therefore, the pH results for samples BOBMQ2, BOBMV6, and BOBMP8 were qualified as estimated (J).

COMMENTS

- The pH of samples collected for cyanide analysis, BOBMQ2, BOBMV6, and BOBMP8, was less than 12. A pH less than 12 may lead to a low bias for cyanide analysis as cyanide may evolve from the samples as HCN, a gas.

RADIOCHEMISTRY

- The LCS recovery was less than 75% for uranium-235. Therefore, the result for this analyte for sample BOBMQ2 was qualified as estimated (UJ).
- The uranium-234 LCS recovery for the U-iso reanalysis of samples BOBMV6 and BOBMP8 was greater than 125%. Therefore, the uranium-234 results for both samples were qualified as estimated (J).

COMMENTS

- The case narrative was present, but incomplete. It lacked comments on Pu-iso, U-iso, gross alpha, gross beta, and the gamma analyses.
- All the analyses requested had results reported, but the laboratory did not report the acceptable reanalysis of U-iso of samples BOBMV6 and BOBMP8. In order to save time, the validator added the reanalysis results to the Form 1's, avoiding the "on hold" situation. The original results were qualified unusable (UR). The reanalysis results were acceptable.
- The MDA for Cs-137 (gamma analysis) (QAPjP) was 5 pCi/L. This was not met for any of the samples. The laboratory used the contract RDLs to evaluate their data. No qualifier was necessary.
- The MDA for Tc-99 (samples BOBMV6 and BOBMP8) was not reported correctly. The Form 1 was edited by the validator.

DATA VALIDATION APPLIED QUALIFIERS

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows.

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ- Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during data validation, the associated quantitation limit is an estimate.
- J- Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision making purposes.
- BJ- Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.
- R- Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency the data are unusable.
- UR- Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data are unusable due to an identified QC deficiency.
- JN- Indicates a tentatively identified compound (TIC) that has been determined to be valid in terms of identification and quantitation.
- UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.
- NJ- Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific application (i.e., usable for decision making purposes).
- N- Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision making purposes).

LABORATORY APPLIED QUALIFIERS

Qualifiers which may be applied by the laboratory in compliance with applicable requirements are as follows.

Organic Data Qualifiers

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- J- Indicates an estimated value. This flag is used when estimating concentrations of tentatively identified compounds (TICs) or when the presence of a TCL compound is confirmed at a concentration of less than the CRQL but greater than the IDL.
- N- Indicates presumptive evidence of a compound. This flag is used only by the laboratory for TIC results when the identification is based on a mass spectral library search.
- P- This flag is used for pesticide/Aroclor target analytes when there is greater than 25% difference for detected values between the quantitation and confirmation GC columns. The lower of the two concentrations is reported on the report form and the result is flagged with a "P".
- C- This flag applies to pesticide results where the identification has been confirmed by GC/MS. This flag should not be used by the laboratory if GC/MS confirmation was attempted but unsuccessful, in which case, the laboratory should use an "X" flag as defined below. The "X" flag is then defined in the SDG narrative.
- B- This flag applies to results in which the analyte was detected in both the sample and the associated blank. The combination of the "B" flag with the "U" flag ("BU" or "UB") is expressly prohibited in the analytical SOW.
- E- This flag identifies compounds whose concentrations exceed the calibrated range of the GC/MS instrument.
- D- This flag identifies compounds identified in an analysis at a secondary dilution factor.
- A- Indicates a TIC which is a suspected aldol-condensate product.
- X- This is a non-specific flag used to properly define the results. If used, this flag must be properly defined within the body of the SDG.

LABORATORY APPLIED QUALIFIERS**Inorganic Qualifiers**

- U- Indicates the analyte was analyzed for but not detected in the sample.
- B- Indicates the analyte concentration is less than the CRDL but greater than the IDL.
- E- Indicates the value reported is estimated due to the presence of interference.
- M- Indicates duplicate injection precision criteria were not met during graphite furnace (GFAA) analysis.
- N- Indicates spiked sample recovery was not within the control limits.
- S- Indicates the reported value was determined by the Method of Standard Additions (MSA).
- W- Indicates post-digestion spike for GFAA analysis is outside control limits and the sample absorbance is less than 50% of the spike absorbance.
- *- Indicates duplicate analysis was not within control limits.
- + - Indicates the correlation coefficient (r) for the MSA was less than 0.995.

BOBMV8 and BOBMV9 are method blanks

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? **Yes** No NA

Is a case narrative present? **Yes** No NA

Comments: _____

2. HOLDING TIMES (see HOLDING TIME SUMMARY form)

Are sample holding times acceptable? **Yes** No NA

Comments: It states in the laboratory narrative that the Msd for BOBMQ2 WAS RUN "25 minutes" past holding time for VOA analysis. As samples were not collected and analysed in same time zone, the Msd for BOBMQ2 was run within hold time as Pacific time must be used to calculate hold time. All hold times met.

DATA VALIDATION SUMMARY**VALIDATION SUMMARY****MAJOR DEFICIENCIES:**

None

MINOR DEFICIENCIES:

The method blank had positive values with associated samples results less than 10x the blank result for Methylene Chloride and Acetone and 5x the blank result for Chloroform. These results were qualified u or 10u, the latter incorporating an upward adjustment to meet the analyte's CRQL.

The percent difference (%D) between the initial and continuing calibration for 1,1,1-Trichloroethane and Carbon Tetrachloride exceeded 25%. These results were qualified uj.

COMMENTS:

A laboratory-generated trip blank was shipped with the WHC samples from Richland to Knoxville for analysis. Trip blank contamination consistent with that found in the method blank indicates that the source of the contamination is the laboratory performing the analysis and not the trip between laboratories.

RADIOCHEMICAL DATA QUALIFICATION SUMMARY

MAJOR DEFICIENCIES:

1. The **U-iso results reported by the laboratory** for BOBMV6 and BOBMP8 are qualified unusable (UR) due to tracer recoveries < 5%. The reanalysis results were **added to the Form 1s by the validator**. The reanalysis results, although not perfect, are usable.

MINOR DEFICIENCIES:

1. The U235 LCS had a recovery < 75% (QAPjP). The result for BOBMQ2 is qualified as estimated (UJ).
2. The U235 and U234 LCSs for the U-iso reanalysis of BOBMV6 and BOBMP8 had recoveries > 125% (QAPjP). The U234 results for both samples are qualified as estimated (J). The U235 results for both samples are both non detects. No qualifier is necessary.

COMMENTS:

1. The case narrative is present, but incomplete. It lacks comments on Pu-iso, U-iso, gross alpha, gross beta, and the gamma analyses.
2. All the analyses requested had results reported, but the laboratory did not report the acceptable reanalysis of U-iso of samples BOBMV6 and BOBMP8. In order to save time, I added the complete results to the Form 1s, avoiding the "ON HOLD" situation. The original results are qualified UR (unusable).
3. The MDA for Tc99 (samples BOBMV6 and BOBMP8) was not reported correctly. The Form 1s are edited.
4. The MDA for Cs137 (gamma analysis) (QAPjP) is 5 pCi/L. This was not met for any of the samples. The laboratory used the contract RDLs to evaluate their data. No qualifier necessary.

***** MDA, Uncertainty Calculations *****

* Calculations are based on the average background counts (bkg) and
 * average sample count times (Ts). Results are in Act/Unit.
 *
 * MDA = [(4.65 * sqrt((bkg c/m)/Ts)) + 2.71/Ts] * K,
 * where K is the factor that converts the
 * associated result from CPM/Aliquot to Act/Unit.
 *
 * The calculated MDA value may be lower than the True MDA.
 * The MDA is the activity level that can be detected above the mean blank
 * value, Xo (Xo is not included)! In addition, only the Poisson counting
 * uncertainty is used to estimated the background variability!
 *
 * * Uncertainty estimates (errors) are one standard deviation (1s) !
 *
 * The average error is calculated as follows:
 * $SQR(SUM(Random\ var) / N + SUM(Sym\ var) / N)$

INORGANIC DATA QUALIFICATION SUMMARY

MAJOR DEFICIENCIES:

1. None

MINOR DEFICIENCIES:

1. The Se result for sample BOBMV6 is qualified as estimated (J) because the analytical spike recovery is < 85%.
2. The Pb results for all samples are qualified as estimated (J/UJ) because the MS/MSD recovery is < 75% but > 30%.
3. The Fe and Zn results for all samples are qualified as non-detect (U) because of positive concentration in the method blank.
4. The Pb results for samples BOBMQ2, BOBMP9 and BOBMV6 are qualified as non-detect (U) because of positive concentration in the method blank.
5. The Mn results for samples BOBMP8 AND BOBMP9 are qualified as non-detect (U) because of positive concentration in a calibration blank.

### I. Introduction

On June 7 and June 9, 1994, twelve (12) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report. One container for sample BOBMQ2 Pest/PCB was received broken. The analysis was taken from the other container. Samples BOBMQ2, BOBMV6 and BOBMP8 for cyanide were received at pH 10.

### II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Compound List (TCL) volatiles and semivolatiles by gas chromatography/mass spectroscopy (GC/MS) in accordance with the EPA CLP 3/90 Statement of Work.

## II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Compound List (TCL) pesticides and PCBs by gas chromatography/electron capture detection (GC/ECD) in accordance with the EPA CLP 3/90 Statement of Work.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

The samples were analyzed for total cyanide in accordance with the EPA CLP ILM03 Statement of Work.

The alkalinity of the samples was determined using EPA method 310.1.

The samples were analyzed for ammonia based on EPA method 350.2.

The samples were analyzed for chemical oxygen demand (COD) at the ITAS ST. Louis laboratory based on EPA method 410.2. A copy of their report is enclosed.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The pH of the samples was determined using EPA methods 150.1 and 9040.

The specific conductance of the samples was measured using EPA method 120.1.

The samples were analyzed for sulfide based on EPA method 376.1.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

The samples were analyzed for total organic carbon (TOC) based on EPA methods 415.1 and 9060.

The samples were analyzed for total organic halogens (TOX) based on EPA method 9020A.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

## III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. All QC results met method specified limits. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMQ2. The analysis of the matrix spike duplicate for sample BOBMQ2 was performed twenty-five minutes outside of holding time. The results for this sample compared well to the matrix spike results.

### III. Quality Control (Continued)

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5' capillary column on a Finnigan 4500 GC/MS/DS. The recovery for surrogate standard 2,4,6-tribromophenol was high in samples BOC1G5 and BOBMQ2 MSD. These results are acceptable for this method. The percent recovery for 4-nitrophenol and pentachlorophenol were high for both the matrix spike and matrix spike duplicate of sample BOBMQ2.

Data were reported with qualifiers as follows:

- U - Compound analyzed for but not detected; value given is quantitation limit.
- E - Compound exceeded calibration range.
- D - Compound analyzed at a secondary dilution factor.
- J - Compound detected but below quantitation limit; value estimated.
- S - Spiked compound.
- B - Compound found in method blank.
- A - Suspected aldol condensation product.
- Y - Indistinguishable isomer in tentatively identified compounds.
- N - Presumptive evidence of compound presence.

The samples for work order #621 were digested on June 15, 1994 for ICP and June 15, 1994 (June 22, 1994 - Lead) for GFAA. The CVAA analysis for mercury was performed on June 23, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 16 through June 28, 1994; the remaining metals were analyzed by ICP on July 1, 1994. All run QC was acceptable. A duplicate and a spike were analyzed using sample number BOBMQ2 (total) and BOBMQ3 (dissolved). Spike recovery (accuracy) results were within acceptance limits for all parameters for both samples except for lead indicating matrix interferences. Duplicate RPD (precision) results were within acceptance limits for all parameters.

The samples for work order #633 were digested on June 15, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 23, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 16 through June 22, 1994; the remaining metals were analyzed by ICP on July 5, 1994. All run QC was acceptable. Samples were batched with QC from work order #621.

Data were reported with qualifiers as follows:

#### "C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

### III. Quality Control (Continued)

#### "Q" Qualifiers

- \* - Duplicate analysis outside control limits.
- N - Spiked sample recovery outside control limits.
- W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
- S - The reported value was determined by method of standard additions.

#### "M" Qualifiers

- P - Analysis performed by ICP.
- V - Analysis performed by CVAA.
- F - Analysis performed by GFAA.
- C - Cyanide analysis by manual distillation/colorimetric determination.

#### Miscellaneous

- D - Duplicate.
- S - Spike.
- NR - Not required.
- G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
- X - Detection limits higher than normal due to sample matrix interferences.

The SDG was grouped into two batches for analysis, however, only one set of quality control samples will be billed to this SDG. In both analytical batches, the matrix spike, LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMQ2 and sample B0BMP8) results are within contractual requirements.

Tritium by method ITAS-RD-3205

SDG W0082 was batched and analyzed with SDG W0090. Quality Control Samples were prepared and analyzed for each SDG. The LCS (L060721S and L060721M), batch blank (L060721X), sample and sample duplicate (duplicate of sample B0BMQ2) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above.
