1.0 SCOPE OF WORK

This description of work details the field activities associated with cable tool drilling of groundwater wells in the 100-FR-3 Operable Unit (Task 6) and will serve as a field guide for those performing the work. It should be used in conjunction with the *Remedial Investigation/Feasibility Study Work Plan for the 100-FR-3 Operable Unit, Hanford Site, Richland, Washington* (DOE/RL 1991) for general investigation strategy and with *Environmental Investigations and Site Characterization Manual* (WHC 1988c) for specific procedures. Well locations are shown on Figure 1.

The coordinates used on Figure 1 are by USGS (1983). All wells on the map are prefixed with a 199, but the prefix has been dropped for clarity.

2.0 GENERAL REQUIREMENTS

2.1 HEALTH AND SAFETY

All personnel working to this description of work will have completed the 40-h Hazardous Waste Site Worker training program and will perform all work in accordance with the following:

- WHC-EP-0383, Environmental Engineering, Technology, and Permitting Function Quality Assurance Program Plan (WHC 1990)
- WHC-CM-4-10, Radiation Protection (WHC 1988d)
- WHC-IP-0692, Health Physics Procedures Manual (WHC 1991b)
- WHC-CM-4-11, ALARA Program (WHC 1988a)
- WHC-CM-4-3, Industrial Safety Manual, Vol. 1 through 3 (WHC 1987)
- WHC-CM-7-5, Environmental Compliance Manual (WHC 1988b)
- WHC-CM-7-7, Environmental Investigations and Site Characterization Manual (WHC 1988c)
- WHC-SD-EN-SAD-002, Rev 0, 100 Area Low Hazard Characterization Activities Safety Assessment (Taylor 1991)
- Site-specific health and safety plan/job safety analysis.

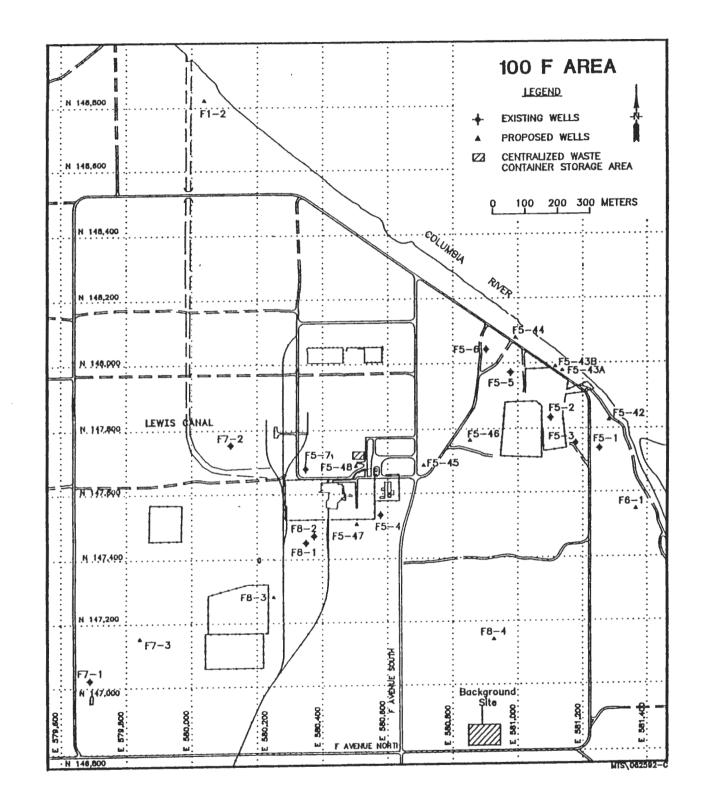

Figure 1. Location of Wells in 100-FR Area.

2.2 PREREQUISITES

Each item on the Drilling Planning Form (EII 6.7, Resource Protection Well and Test Borehole Drilling) (WHC 1988c) will be signed and dated by the cognizant engineer or field team leader prior to the start of work. A readiness review, if required will be conducted according to EII 1.13, Readiness Review (WHC 1988c). In addition, all field work will be conducted in accordance with *Generic Well Specification* (WHC 1991a).

3.0 SAMPLING AND FIELD ACTIVITIES

3.1 SOIL SCREENING

All samples and cuttings will be field screened for evidence of volatile organics and radionuclides (Section 5.1.6.2.3 of the 100-FR-3 work plan) (DOE/RL 1991). Volatiles will be screened by the field geologist using an organic vapor monitor (OVM) that will be used, maintained, and calibrated consistent with EII 3.2, Health and Safety Monitoring Instruments (WHC 1988c) and EII 3.4, Field Screening (WHC 1988c). Radionuclide screening will be performed by the field geologist per EII 3.4, Field Screening (WHC 1988c). The field geologist will record screening results in the borehole log (EII 9.1, Geologic Logging) (WHC 1988c).

The action level for radionuclide screening is twice background. The action level for volatile organic screening is 5 ppm above background. Prior to initiating drilling, determine a one time instrument background reading using the above instruments at the background site located on Figure 1. Instrument background will be measured on freshly disturbed surface soil, holding the instruments less than 1 in. from the soil. The field geologist will record the background levels in the borehole log per EII 9.1, Geologic Logging (WHC 1988c) prior to the start of drilling.

3.2 GEOLOGIC SAMPLING

Geologic samples will be taken at 5-ft intervals for each hole and at major stratigraphic changes for the preparation of borehole logs, per Section 5.1.6.2.3 of the 100-FR-3 work plan (DOE/RL 1991) and EII 9.1, Geologic Logging (WHC 1988c). The field geologist shall archive the nonradioactive geologic samples per EII 5.7A, Hanford Geotechnical Sample Library Control (WHC 1988c).

At the completion of each groundwater well two composite samples will be collected (from unsaturated sediments): one from archive samples in the top half of the well and one from archive samples in the bottom half. An equal volume will be taken from each archive sample, composited in a stainless steel bowl, and placed in a 500-ml glass bottle. Each composite sample will be analyzed for Gamma Spec only, as a check on the radiation detection instrument. Results will be stored in the project files. All waste generated during drilling activities will be handled according to EII 4.3, Control of CERCLA and Other Past-Practice Investigation Derived Waste (WHC 1988a).

3.3 SOIL SAMPLING (PHYSICAL PROPERTY)

Collect four samples for physical property analysis per Section 5.1.5.3 of DOE/RL (1991) and EII 5.2, Appendix B, Soil and Sediment Sampling (WHC 1988c) from each of the following wells: 199-F5-43A, 199-F5-48, and 199-F7-3. Collect one sample near the bottom of well 199-F5-43B, within the confining unit. Samples that do not meet the physical properties testing lab radiological acceptance criteria will not be collected for physical property testing. Alternate wells will be 199-F5-43B, 199-F5-47, and 199-F8-3.

The goal for selecting physical property samples is to collect one sample from the top third, one from the middle third, and one from the bottom third of the unsaturated zone, and one within the saturated zone. The sample collected from the bottom third of the unsaturated zone must be collected as close as possible to the water table. The field geologist must use professional judgement to select samples that are representative of the principle soil types that can be sampled with the split-spoon sampler. Two 6-in. sleeves and one moisture tin will be collected. The field geologist will record the selected samples in the borehole log per EII 9.1, Geologic Logging (WHC 1988c).

These samples will be analyzed for the following parameters using American Society for Testing and Materials (ASTM) methods. Bulk density will be calculated. K_{unsat} will be both measured and calculated, for comparative purposes.

- Bulk density
 Samples in the unsaturated zone only
- Particle Size Distribution (ASTM D422-63)
 All samples
- Moisture Content (ASTM D2216)
 Samples in the unsaturated zone only
- Moisture Retention (ASTM D2325-68, D3152-72)
 Samples in the unsaturated zone only. Performed only on samples in which 25% of the sample passes the #10 screen.
- Saturated Hydraulic Conductivity (K_{sat}) (ASTM D2434-68)
 All samples
- Unsaturated Hydraulic Conductivity (K_{unsat}) at 10% moisture content after full saturation
 - Samples in the unsaturated zone only. Performed only on samples in which 25% of the sample passes the #10 screen.

Data collected from these analyses will be stored in the 100-FR-3 project files.

3.4 ANALYTICAL SAMPLING

3.4.1 Soil

· · ·

ر مر

 \mathcal{T}^{i}

 \sim

6

Collect analytical soil samples in all wells except those listed below per Section 5.1.6.2.3 of the 100-FR-3 work plan (DOE/RL 1991) and EII 5.2, Appendix B, Soil and Sediment Sampling (WHC 1988c). Collect these at 10 ft above the expected groundwater, one 5 ft above and one 5 ft below the groundwater. In addition, if screening values (including borehole cuttings and geologic samples) exceed screening action levels, collect analytical samples with a split-spoon sampler at 5-ft intervals until either: 1) two consecutive screening values fall below the screening action limits outlined above or 2) until 5 ft below groundwater.

Unless screening action levels are exceeded, only one analytical soil sample will be taken in well 199-F5-43B, at the bottom of the unconfined aquifer. If additional samples are required, they will be collected by the screening criteria described above and recorded in the borehole log (EII 9.1, Geologic Logging) (WHC 1988c).

The integrity of the well seal will be tested according to the test plan written for 300-FF-5 (EMO-1029, AD-940).

Estimated depths, screened intervals, and samples to be taken are shown on Table 1.

Well number	Est. depth (ft)	Design type	Est. screened interval (ft)	Physical prop. samples
199-F6-1	60	shallow	40 - 60	no
199-F5-42	60	shallow	40 - 60	no
199-F5-43A	60	shallow	40 - 60	yes (4)
199-F5-43B	150	deep	140 - 150	yes (1)
199-F5-44	60	shallow	40 - 60	no
199-F5-45	60	shallow	40 - 60	no
199-F5-46	60	shallow	40 - 60	no
199-F5-47	60	shallow	40 - 60	no
199-F5-48	60	shallow	40 - 60	yes (4)
199-F8-3	60	shallow	40 - 60	no
199-F1-2	60	shallow	40 - 60	no
199-F7-3	60	shallow	40 - 60	yes (4)
199-F8-4	60	shallow	40 - 60	

Table 1. Well Depths and Sampling Information.

3.4.2 Groundwater

Groundwater samples will be collected from each well per EII 5.8 Groundwater Sampling (WHC 1988c) and analyzed for the full suite of parameters listed below for the first two rounds of sampling (Section 5.1.6.3 of the 100-FR-3 work plan) (DOE/RL 1991).

3.4.3 Analyses

Samples collected for chemical analysis will be analyzed for the full suite of CERCLA Contract Laboratory Program (CLP) Target Compound List (TCL) and Target Analyte List (TAL) constituents, specific anions that may be present, and for radionuclides. Estimated quantity of material needed for analyses are shown in Tables 1 and 2. The laboratory will use existing Level IV CLP methods for radiological constituents and methods approved under their contract for radiological analyses (Level V). Sample custody will follow procedures as outlined in EII 5.1, Chain of Custody (WHC 1988c).

AA = atomic absorber	SOP = standard operating procedures
CLP = Contract Laboratory Program	VOA = volatile organic analyses
ICP = inductively coupled plasma	G = glass
PCB = polychlorinated biphenyl	aG = amber glass
N/A = not applicable	P = plastic

If full sample volume requirements cannot be met, the sampling scientist will record the volume obtained in the sampling scientists logbook per EII 1.5, Field Logbooks (WHC 1988c) and analyze in the following order:

1. Volatiles

- 2. Semivolatiles/PCBs/pesticides
- 3. Target Analyte List
- 4. Radioisotopes
- 5. Anions
- 6. Total Activity

3.5 GEOPHYSICAL LOGGING

Gross-gamma log all groundwater wells, performing the work in two stages: Stage 1 after completing the first 20 ft of drilling before reducing to a smaller casing. If the gross-gamma tool is not available within 4 h of when needed, skip logging the first 20 ft. Stage 2 after reaching total depth and before completing the well (EII 11.1, Geophysical Logging) (WHC 1988c). Spectral-gamma log groundwater wells only if contamination is indicated by the

gross-gamma log (survey exceeds 100 cps for any depth interval) or by field screening.

3.6 AQUIFER TESTING

Perform a slug test on each well per Section 5.1.6.2.5 of the 100-FR-3 work plan (DOE/RL 1991) and EII 10.1, Aquifer Testing (WHC 1988c). If results of the slug tests prove to be of limited value, other tests may be performed.

4.0 QUALITY ASSURANCE/QUALITY CONTROL REQUIREMENTS

Internal quality control samples shall be collected by the sampling scientist as stated below, per Appendix A, Quality Assurance Project Plan (DOE/RL 1991) and documented in the sampling logbook per EII 1.5, Field Logbooks (WHC 1988c). The trip blank and field blank have been deleted for soil sampling per EPA/540/G-87/004 Appendix C, Section C.6.

Groundwater:

- 1. Collect one duplicate for every 10 groundwater samples or a minimum of 1 per reactor area.
- 2. Collect one split sample per reactor area.
- 3. Collect field blanks at the same frequency as duplicates.
- 4. Collect one (VOA) trip blank per cooler that contains samples that will be analyzed for volatiles. Only analyze for volatiles.
- 5. Collect equipment blanks at the same frequency as duplicates.

<u>Soil</u>:

- 1. Collect one duplicate for every 20 soil samples.
- 2. Collect one split sample per reactor area.
- 3. Field blanks are not required.
- 4. Collect one sample each month from any source of water introduced into the hole during drilling. Only one sample is required for both groundwater and vadose borings. Analyze for the full suite of water parameters.
- 5. Collect one (VOA) trip blank for each batch of containers shipped to the sampling (site) facility and analyze for volatiles only. The media shall be silica sand.
- 6. Collect equipment blanks at the same frequency as duplicates and analyze for the constituents listed in Table 2. The media shall be silica sand.

5.0 SCHEDULE

The following schedule is for drilling in the 100-FR-3 operable unit for 1992. This schedule is subject to change and the operable unit coordinator should be contacted for current status. An Agreement Activity Notification form will be issued at least 5 days prior to start of field work.

5

6.0 CHANGES TO THE DESCRIPTION OF WORK

Major changes to this description of work, such as analyzing different parameters, using different analytical methods, or changing the sampling interval will be submitted on the attached form (Attachment 1) and kept on file with the operable unit coordinator. Copies will be submitted to the lead regulatory agency and appropriate field personnel.
