HANFORD CLEANUP

Your review is requested on the...

Engineering Evaluation/Cost Analysis for 100-N Area Waste

The U.S. Department of Energy and the Washington State Department of Ecology want your comments on a proposed removal action to dispose of waste generated during pre-cleanup activities of the 100-N Area, such as contaminated soil, equipment, and sediment. You will be commenting on an engineering evaluation/cost analysis (EE/CA) to assist in selecting the preferred removal action. The objectives of the removal action are to reduce the threat of release of hazardous substances contained in the wastes, protect workers from hazards posed by the waste, and minimize costs associated with waste disposal. The removal action scope is limited to disposal of 100-N Area wastes only. The recommended alternative is to dispose of the wastes at the Environmental Restoration Disposal Facility (ERDF). This alternative removes the potential for a release of hazardous substances that could adversely impact human health and the environment, is protective of workers, minimizes disposal costs, and requires no expansion of the ERDF. The public comment period begins on August 23 and ends September 21, 1996.

**To request a copy of the EE/CA for 100-N Area Waste
or for further information contact:**
