SUBJECT: TRANSMITTAL OF THE 100-N BARRIER WALL DESIGN DRILLING PROGRAM, BHI-00045, Revision 1.

This letter transmits two copies of Revision 1 to BHI-00045, 100 N Barrier Wall Design Drilling Program. Revisions center on establishing an increased number of samples to be collected for Strontium Retardation Coefficient/ Total <sup>90</sup>Strontium. Additionally, to minimize drilling, the monitoring wells at each end of the barrier alignment will be installed in the geotechnical borings.

The purpose of this document has not changed. It is to describe and plan the collection of field data to support the design of the N-Springs Expedited Response Action Hydraulic Barrier. This document is not specifically identified in the draft TPA change control form #M-16-94-02, however, information collected as described with the plan will be transmitted to the barrier contractor to support completion of draft milestones M-16-01N-T2, "Begin Site Preparation" and M-16-01N-T3, "Initiated Sheet Pile Wall Construction."

If you have any questions or concerns, feel free to contact me.
