Mr. R. D. Hanson, President
Fluor Hanford, Inc.
Richland, Washington 99352

Dear Mr. Hanson:

CONTRACT NO. DE-AC06-96RL13200 - ASSIGNMENT OF UNASSIGNED WASTE SITES

In August of 1997, the U.S. Department of Energy, Richland Operations Office (RL), completed a multi-office task team commission, led by John Murphy of the Office of Assistant Manager for Environmental Management, to review unassigned waste sites and establish a set of criteria for making program baseline assignments for newly discovered waste sites (RL 049471). At that time, the backlog of unassigned waste sites was assigned to RL programs and site contractors, and recorded in the Waste Information Data System (WIDS). Since that time, new waste sites or expansions of the old waste sites have occurred. The assignment criteria contained in the RL 049471 letter was again used in the assignment of these waste sites. By this letter, RL is directing you to undertake management responsibility under your scope of work for those waste sites assigned to you in the attached tables (see Attachment 1, Backlog of Unassigned Sites in WIDS; and Attachment 2, New Contamination Zones and Assignment to Old or New WIDS Sites).

You are to ensure that access control, surveillance and maintenance reporting, record keeping, and disposition planning requirements are met for each new waste site added to your control via this letter. Additionally, you are to review the newly assigned waste sites to determine if there is a financial impact to your program that requires an adjustment to the program baseline.

In those cases where an uncontrolled contamination area is discovered ensure that DOE HFID 232.1B Notification, Reporting and Processing of Operations Infomation reporting requirements are followed. Every avenue of reporting on the Occurrence Reporting and Processing System (ORPS) system, even under "GENERAL," has an assigned Facility Representative (FR). If the contractor is unaware of whom the assigned FR is, they can contact the Occurrence Notification Center for the information or look on the ORPS authority file.

DOE has noted that the majority of these waste sites are either expansions of old waste sites, or associated with existing pipelines that are assigned under the provisions of RL049471. Contractors are required to follow 10 Code of Federal Regulations (CFR) Section 835.1102 Control of Areas, that states: "(a) Appropriate controls shall be maintained and verified which prevent the inadvertent transfer of removable contamination to locations outside

of radiological areas under normal operating conditions." Failure to comply with 10 CFR 835 can result in enforcement actions or civil penalty under the Price-Anderson Amendments Act.

If you have any questions or require additional information, please contact Thomas W. Ferns, Environmental Restoration Division, on (509) 372-0649.

Sincerely,

Sally A. Sieracki
Contracting Officer
