Waste Site Reclassification Form

<p>Date Submitted: 03/28/02</p> <p>Originator: R. A. Carlson</p> <p>Phone: 372-9632</p>	<p>Operable Unit(s): 100-NR-1</p> <p>Waste Site ID: 100-N-58</p> <p>Type of Reclassification Action:</p> <p>Rejected <input type="checkbox"/></p> <p>Closed Out <input checked="" type="checkbox"/></p> <p>No Action <input type="checkbox"/></p>	<p>Control Number: 2001-093</p> <p>Lead Agency: Ecology</p>
--	--	---

This form documents agreement among the parties listed below authorizing classification of the subject units as rejected, closed out, or no action and authorizing backfill of the sites, if appropriate.

Description of current waste site condition: The remedial/corrective action at the 100-N-58 site has been performed in accordance with the performance standards established by the U.S. Environmental Protection Agency and the Washington State Department of Ecology, in concurrence with the U.S. Department of Energy, Richland Operations Office. The remedial/corrective action for the 120-N-1 and 120-N-2 sites including associated pipelines (RCRA TSD unit) was also performed in accordance with the performance standards with the exception of final backfill. Closeout of this RCRA TSD unit will be done following completion of backfill and completion of the certification of closure. The selected remedial/corrective action for the 120-N-1, 120-N-2, and 100-N-58 sites including associated pipelines involved removing and disposing of miscellaneous structures including the former 120-N-2 pond liner, a small sampling shed, miscellaneous steel fencing, and concrete debris. All of the material removed from these sites was done for the purpose of returning the sites back to a more natural state. The removed material was disposed of at a demolition debris site in the 100-H Area. Remedial/corrective action was not required for soil. The ends of the remaining pipelines will be plugged with grout.

Basis for reclassification: The 100-N-58 site meets the closure performance standards specified in the 100-NR-1 Treatment, Storage, and Disposal Units Corrective Measures Study/Closure Plan, DOE/RL-96-39, Rev. 0, and the Remedial Design Report/Remedial Action Work Plan for the 100-NR-1 Treatment, Storage, and Disposal Units, DOE/RL-2000-16, Rev. 1. The site remedial/corrective action was performed to return the site to a more natural state and to allow rural-residential use of soils and to protect groundwater and the Columbia River. The basis for reclassification is described in detail in the Cleanup Verification Package/Clean Closure Report for the Soil Column of the 120-N-1 and 120-N-2 Dangerous Waste Treatment and Disposal Sites and the 100-N-58 Site (CVP-2001-00021), Bechtel Hanford, Inc., Richland, Washington. The CVP also documents that the RCRA TSD unit sites are acceptable for backfilling.
