Re: U.S. Cellular Email, to D. Hendrickson, Ecology, *Temporary Power,* dated July 27, 2006

Dear Mr. Monselle:

This letter responds to your emailed notification of a portable and temporary source upon leased land within the Hanford Site (near the Wye Barricade) under Chapter 173-400 of the Washington Administrative Code (WAC.) The proposed source is a 2003 diesel-fired 47 horsepower (35 kW) generator. It will be operated to supply power pending installation of grid power for a U.S. Cellular tower approximately between July 28, and October 31, 2006.

The information provided within your notification is sufficient to comply with the informational needs of WAC 173-400-035(1). This portable and temporary source operation is approved for a period not to exceed six months from onset of the project. This approval period, greater than your immediate projections, is provided in the event rework or parallel work (at other locations) within the boundary of the Hanford Site is applicable and required. These operations must be available for inspection by the Department of Ecology upon request. Please keep a record of the generator serial number with this approval.

If you have any questions or require additional information, contact me at 509-372-7983.

Sincerely,

Doug Hendrickson, P.E.
Lead Air Engineer
Nuclear Waste Program
